Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 12-week training program consisting of 3 sessions per week of 30 min of aerobic exercise at 70% of their maximum heart rate. The CG did not exercise. The HR and HRR were measured at rest and during a maximal exercise test at baseline and after 12 weeks. The EG showed a significant decrease in HR at rest and during the maximal exercise test, and a significant increase in HRR at rest and during the maximal exercise test, compared to the CG. The results of this study suggest that a 12-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, if you're using the `afs` multi-mount method, set `mountmnt` to `/usr/bin/netatun-afs`. This is required after the purchase of this type of multi-mount AFS, as pointing out the group appears in `group 1`.
25. Do not include the `afs` of `mountmnt` in `afs` dependencies.
26. When installing the `afs` multi-mount AFS, the `afs` group is added to the `afs` group. Use the `afs` group to create the `afs` group.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - Turn off the lights at the end of the work day.
 - Use red light for night shifts, as the wavelength of this light may be less disruptive to the circadian rhythm. Red light has the longest wavelength and the lowest energy, so it is least likely to affect the circadian rhythm. Some studies suggest that the 650 nm (red) light may be the best choice for night shifts.
