

Saunders NCLEX-RN Study – Renal Questions With Correct Answers 2023

A+ Review Test

A client with acute kidney injury has a serum potassium level of 7.0 mEq/L (7.0 mmol/L). The nurse should plan which actions as a priority? Select all that apply.

1. Place the client on a cardiac monitor.
2. Notify the health care provider (HCP).
3. Put the client on NPO (nothing by mouth) status except for ice chips.
4. Review the client's medications to determine if any contain or retain potassium.
5. Allow an extra 500 mL of intravenous fluid intake to dilute the electrolyte concentration. - ANS-1, 2, 4

R: NPO is unnecessary. Adding extra fluid may worsen the situation and lead to fluid overload. Excess K can cause heart dysrhythmias, so 1&4 are appropriate. Calling the HCP is also necessary for further orders.

A client arrives at the emergency department with complaints of low abdominal pain and hematuria. The client is afebrile. The nurse next assesses the client to determine a history of which condition?

1. Pyelonephritis
2. Glomerulonephritis
3. Trauma to the bladder or abdomen
4. Renal cancer in the client's family - ANS-3

R: 1& 2 are similar/alike, and they would involve a fever. 4 would have flank pain instead of low abd pain.

The nurse discusses plans for future treatment options with a client with symptomatic polycystic kidney disease. Which treatment should be included in this discussion? Select all that apply.

1. Hemodialysis
2. Peritoneal dialysis
3. Kidney transplant
4. Bilateral nephrectomy
5. Intense immunosuppression therapy - ANS-1,3,4

R: Polycystic KD involves cysts that eventually rupture and damage the kidneys, leading to end-stage renal disease. This requires options 1, 3, or 4. 2 is contraindicated r/t infection. 5 won't help the pt's condition.
