Setswana Paper3 Grade9 2014:

Teaching Reading Comprehension to English Learners in Secondary Schools: A Research-Based Approach

Cekiso, Madoda, Olifant, Florence, Mokhtari, Kouider, 2025-04-23 Teaching reading comprehension to English learners ELs in secondary schools presents unique challenges as these students must navigate the complexities of academic texts and the intricacies of language acquisition. Effective instruction requires a research-based approach that considers the diverse linguistic, cultural, and cognitive backgrounds of these learners. Recent studies highlight the importance of integrating strategies that build both language proficiency and content knowledge, essential for helping ELs develop the skills needed to comprehend complex materials. Fostering metacognitive awareness through strategies like summarizing, questioning, and making connections can empower students to become active and strategic readers. This approach recognizes the need for a supportive, inclusive classroom environment that encourages language development while promoting academic achievement in content areas. Further research may help educators provide English learners with the tools to thrive as capable readers in secondary school. Teaching Reading Comprehension to English Learners in Secondary School: A Research-Based Approach explores various aspects of teaching reading comprehension to English Second Language (ESL) learners in secondary schools. It examines current challenges and evidence-based strategies in reading comprehension. This book covers topics such as language learning, reading strategies, and teacher training and is a useful resource for academicians, researchers, and scientists.

Artificial Intelligence and Mental Health Care Jorge Piano Simoes, Peter ten Klooster, Jannis Kraiss, Patrick K. A. Neff, Uli Niemann, 2024-08-09 New developments in machine learning (ML) and artificial intelligence (AI) hold great promise to revolutionize mental health care. In this context, ML and AI have been deployed for several different goals, including: 1) the early detection of mental disorders; 2) the optimization of personalized treatments based on the individual characteristics of patients; 3) the better characterization of disorders detrimental to mental well-being and quality of life; as well as a better description of projected trajectories over time; and 4) the development of new treatments for mental health care. Despite their great potential to transform mental health care and occasional breakthroughs, ML and AI have not yet fully achieved these goals. This research topic aims to bridge the gap between the potential uses of ML and AI and their practical application in standard mental health care. More specifically, we welcome original research submissions applying ML and AI to promote public health by reducing the burden of chronic disorders with detrimental effects on well-being, e.g., psychopathological distress and improving quality of life. We also welcome submissions applying ML and AI in heterogeneous datasets, e.g., subjective scales and questionnaires, biomarkers, neuro-psychological assessments, etc. from Big Data sources, e.g., large datasets of clinical populations, electronic health records from nationally representative cohorts, and/or biobanks studies using experiencing sampling methods, etc. to gain mechanistic insight on how different chronic conditions associated with psychopathological distress can affect patient well-being and quality of life. Finally, we also welcome opinion papers and

reviews on how to develop AI applications in mental health care responsibly while integrating biopsychosocial aspects of patients to promote better mental health care
