I See What You Mean Steve Moline, 2023-10-10 Some educators may view diagrams pictures and charts as nice add on tools for students who are visual thinkers But Steve Moline sees visual literacy as fundamental to learning and to what it means to be human In Moline's view we are all bilingual Our second language which we do not speak but which we read and write every day is visual From reading maps to decoding icons to using concept webs visual literacy is critical to success in today's world The first edition of *I See What You Mean* published in 1995 was one of the first books for teachers to outline practical strategies for improving students visual literacy In this new and substantially revised edition Steve continues his pioneering role by including dozens of new examples of a wide range of visual texts from time maps and exploded diagrams to digital tools like smartphone apps and tactile texts In addition to the new chapters and nearly 200 illustrations Steve has reorganized the book in a useful teaching sequence moving from simple to complex texts In one research strategy called recomposing Steve shows how to summarize paragraphs of information not as a heap of interesting facts but as a diagram The diagram can then work as a framework for students to follow when writing an essay This overcomes the teacher's problem of cut and paste essays and by following their own diagram summary students have an answer to their familiar questions Where do I start What do I write next

Theory of Electric and Magnetic Orientation in Sharks and Rays Revisited Adrianus J. Kalmijn, 2024-08-15 The book describes the theory of electromagnetic orientation in sharks and rays The theory evolved from studying the publications of Faraday von Arx and Longuet-Higgins Sharks and rays can detect the earth's magnetic field as well as the ambient electric fields utilizing their electrosensory system the Ampullae of Lorenzini Dr Kalmijn provides the physical description of this sensory system in the context of his previously published behavioral studies performed in the laboratory and in natural open ocean settings The book lays bare the physics bedrock of the motional electric fields The physics of the entire sensory environment interacting with these very sensitive organs is made clear step by step so the reader can understand the source of the fields and how the animals detect them Dr Kalmijn analyzes the sensory organs from the perspective of the animal moving through these electric and magnetic fields to arrive at the appropriate relativistic frame to understand how the sensory system works Relying on his thorough understanding of Maxwell Faraday and Einstein he has sought to understand the miraculous abilities of Elasmobranchs The detailed presentation clears away many of the misunderstandings and mistakes of previous researchers Nearly all the mistakes pertain to the underlying physics The existing literature is discussed put in context and corrected This summary and final presentation of Dr Kalmijn's life time study of electromagnetic reception in Elasmobranchs will surely be recognized as the definitive treatise in years to come It gives researchers and students in biology physics oceanography and fisheries a detailed mathematical physics background for the understanding of electroreception in Elasmobranch fishes

Scott Carter, Seiichi Kamada, 2021-12-15 This book is an introduction to techniques and results in diagrammatic algebra It starts with abstract tensors and their categorifications presents diagrammatic methods for studying Frobenius and Hopf algebras and discusses their relations with topological quantum field theory and knot theory The text is replete with figures diagrams and suggestive typography that allows the reader a glimpse into many higher dimensional processes The penultimate chapter summarizes the previous material by demonstrating how to braid 3 and 4 dimensional manifolds into 5
