These percentile norms are based on the AIMSweb national norms for kindergarten through Grade 5. (For details, see AIMSweb National Norms Technical Documentation at www.aimsweb.com, under Research Studies and Information on the Research Norms.) The rate of improvement (ROI) norm point per student was calculated for each student in the norm sample for each of three seasons: fall-winter, winter-spring, and fall-spring. An ROI growth percentile indicates the percentage of students in the norm sample with an ROI score below a given value.

Students' average rate of improvement can differ depending on their initial performance level (e.g., in the fall for a fall-spring ROI). Therefore, the ROI growth norms were constructed based on four performance levels: Very Low (20%–40% percentile), Low (40%–50% percentile), Average (50%–70% percentile), High (70%–80% percentile), and Very High (80%–90% percentile). The relationship of ROI to each score level and time of year (fall-winter or winter-spring) is described in the AIMSweb ROI Growth Norm Guide, located on the Norms page for the AIMSweb system.

To find a student's ROI growth percentile, go to the section for the student's grade and select winter, fall, and then identify the column for the comparison interval (fall-winter, winter-spring, or fall-spring). Then, find the student's ROI in the norm column, and then read across the row to find the corresponding ROI growth percentile. For example, if a Grade 3 student obtained a fall to winter score of the 10th percentile (Low), then this student's fall-spring ROI of 3 fell correspondingly in the 70th percentile (High).
