Scattering And Diffraction In Physical Optics (2nd Edition) Manuel Nieto Vesperinas, 2006-06-01
This book presents a comprehensive tutorial on propagation diffraction and scattering problems from the basic principles of physical optics Beginning with the fundamental differential and integral equations for wavefields the text presents an exhaustive discussion on the extinction theorem as a non local boundary condition this has been extensively employed for the rigorous solution of scattering and diffraction problems There is also an in depth presentation of the topic of scattering from rough surfaces in particular the phenomenon of enhanced backscattering as well as a detailed development of the angular spectrum representation of fields leading to questions on non diffraction beams Of key interest in near field optical microscopy and nanooptics the S matrix theory based on the angular spectrum for propagating components and the recently discovered properties of the S matrix for evanescent components of wavefields are considered In addition the book deals with the healing effect of phase conjugation on waves and focuses on some applications concerning the relationship with time reversal Readers will also find discussions on image recovery from partial information data phase problems and super resolution problems as well as a chapter on the fundamentals of near field optical microscopy techniques including the hot topic of propagation in negative index media

Classical and Modern Methods in Summability Johann Boos, 2000
Summability is a mathematical topic with a long tradition and many applications in for example function theory number theory and stochastics It was originally based on classical analytical methods but was strongly influenced by modern functional analytical methods during the last seven decades The present book aims to introduce the reader to the wide field of summability and its applications and provides an overview of the most important classical and modern methods used Part I contains a short general introduction to summability the basic classical theory concerning mainly inclusion theorems and theorems of the Silverman Toeplitz type a presentation of the most important classes of summability methods Tauberian theorems and applications of matrix methods The proofs in Part I are exclusively done by applying classical analytical methods Part II is concerned with modern functional analytical methods in summability and contains the essential functional analytical basis required in later parts of the book topologization of sequence spaces as K and KF spaces domains of matrix methods as FK spaces and their topological structure In this part the proofs are of functional analytical nature only Part III of the present book deals with topics in summability and topological sequence spaces which require the combination of classical and modern methods It covers investigations of the consistency of matrix methods and of the bounded domain of matrix methods via Saks space theory and the presentation of some aspects in topological sequence spaces Lecturers graduate

students and researchers working in summability and related topics will find this book a useful introduction and reference work
