The Challenges of the Digital Transformation in Education Michael E. Auer, Thrasyvoulos Tsiatsos, 2019-03-15 This book offers the latest research and new perspectives on Interactive Collaborative Learning and Engineering Pedagogy We are currently witnessing a significant transformation in

education and in order to face today's real world challenges higher education has to find innovative ways to quickly respond to these new needs. Addressing these aspects was the chief aim of the 21st International Conference on Interactive Collaborative Learning ICL2018 which was held on Kos Island Greece from September 25 to 28 2018. Since being founded in 1998 the conference has been devoted to new approaches in learning with a special focus on collaborative learning. Today the ICL conferences offer a forum for exchanging information on relevant trends and research results as well as sharing practical experiences in learning and engineering pedagogy. This book includes papers in the fields of Collaborative Learning Computer Aided Language Learning CALL Educational Virtual Environments Engineering Pedagogy Education Game based Learning K 12 and Pre College Programs Mobile Learning Environments Applications. It will benefit a broad readership including policymakers educators researchers in pedagogy and learning theory school teachers the learning industry further education lecturers etc. Final Cut Pro 5. Data Structures Using Scala Mark C. Lewis, Lisa Lacher, 2017-01-06. Praise for the first edition: The well written comprehensive book is aiming to become a de facto reference for the language and its features and capabilities. The pace is appropriate for beginners; programming concepts are introduced progressively through a range of examples and then used as tools for building applications in various domains including sophisticated data structures and algorithms. Highly recommended. Students of all levels, faculty and professionals, practitioners. D. Papamichail, University of Miami in CHOICE Magazine. Mark Lewis: Introduction to the Art of Programming Using Scala was the first textbook to use Scala for introductory CS courses. Fully revised and expanded, the new edition of this popular text has been divided into two books: Object Orientation, Abstraction and Data Structures Using Scala. Second Edition is intended to be used as a textbook for a second or third semester course in Computer Science. The Scala programming language provides powerful constructs for expressing both object orientation and abstraction. This book provides students with these tools of object orientation to help them structure solutions to larger, more complex problems and to expand on their knowledge of abstraction so that they can make their code more powerful and flexible. The book also illustrates key concepts through the creation of data structures showing how data structures can be written and the strengths and weaknesses of each one. Libraries that provide the functionality needed to do real programming are also explored in the text including GUIs, multithreading and networking. The book is filled with end of chapter projects and exercises and the authors have also posted a number of different supplements on the book website. Video lectures for each chapter in the book are also available on YouTube. The videos show construction of code from the ground up and this type of live coding is invaluable for learning to program as it allows students into the mind of a more experienced programmer where they can see the thought processes associated with the development of the code. About the Authors: Mark Lewis is an Associate Professor at Trinity University. He teaches a number of different courses spanning from first semester introductory courses to advanced seminars. His research interests included simulations and

modeling programming languages and numerical modeling of rings around planets with nearby moons Lisa Lacher is an Assistant Professor at the University of Houston Clear Lake with over 25 years of professional software development experience She teaches a number of different courses spanning from first semester introductory courses to graduate level courses Her research interests include Computer Science Education Agile Software Development Human Computer Interaction and Usability Engineering as well as Measurement and Empirical Software Engineering
