Krebs, 1999-02-28 The evolution of science through the ages has often been marred by people s misconceptions From pre historic times when myths played a major role in people s lives to present day debates concerning the environment people have sought ways to explain the world around them and have often come up with incorrect answers Science has grown through the correction of these misconceptions This unique reference source can be used by students teachers and other interested researchers to explore this growth as it pertains to both the field of science and the process of scientific experimentation Readers will discover how misunderstandings led to further experimentation and eventually to scientific facts These false paths to scientific knowledge are not treated as deliberate misconduct but rather as a lack of knowledge and a misunderstanding of the science and technology involved both of which were sooner or later corrected by men and

For the Sake of Our Salvation Scott Hahn,2011-02-22 This is the sixth annual volume of the remarkably popular journal of biblical

theology edited by Scott Hahn and his St Paul Center for Biblical Theology This volume features an all star lineup tackling one of the most controversial and important subjects in biblical scholarship the inspiration and truth of Sacred Scripture What does it mean to say that Scripture is the Word of God Are there errors in Scripture These are some of the questions addressed in important new works by Hahn Brant Pitre Pablo Gadenz Michael Waldstein John Betz and Germain Grisez Highlights include Hahn s new essay on the the truth and humility of God s Word and Gadenz s authoritative review of the Catholic teaching on the inerrancy of Scripture This volume also includes a never before translated essay by Romano Guardini Holy Scripture and the Science of Faith From the Editors introduction The widespread erosion in the assumption that Scripture is the true Word of God forms the broader context for the articles and studies in this volume of Letter Spirit As we see it the work we present in these pages is no ivory tower exercise It is no exaggeration to say that at stake in this discussion is the future of the identity of the Church and the mission of the Word incarnate If the Scriptures cannot be trusted to communicate the truth about God and his saving message if they do not bring us to the encounter with the living God who speaks his Word then it must be asked what is the meaning and purpose of the Church     *Physics for the Inquiring Mind* Eric M. Rogers, 2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking *Physics for the Inquiring Mind* is a book for the inquiring mind of students in college and for other readers who want to grow in scientific
