Remote Sensing of Night-time Light Christopher Elvidge, Xi Li, Yuyu Zhou, Changyong Cao, Timothy A. Warner, 2021-08-09 Satellite images acquired at night provide a visually arresting perspective of the Earth and the human activities that light up the otherwise mostly dark Earth These night time light satellite images can be compiled into a geospatial time series that represent an invaluable source of information for both the natural and social sciences Night time light remote sensing has been shown to be particularly useful for a range of natural science and social science applications including studies relating to urban development demography sociology fishing activity light pollution and the consequences of civil war Key sensors for these time series include the Defense Meteorological Satellite Program s Operational Linescan System DMSP OLS and the Suomi National Polar orbiting Partnership Satellite s Visible Infrared Imaging Radiometer Suite Day Night Band Suomi NPP VIIRS DNB An increasing number of alternative sources are also available including high spatial resolution and multispectral sensors This book captures key methodological issues associated with pre processing night time light data documents state of the art analysis methods and explores a wide range of applications Major sections focus on NPP VIIRS DNB processing inter calibration between NPP VIIRS and DMSP OLS applications associated with socio economic activities applications in monitoring urbanization and fishing activity monitoring The chapters in this book were originally published as a special issue of the International Journal of Remote Sensing Urban Landscape Ecology Robert A. Francis, James D.A. Millington, Michael A. Chadwick, 2016-04-14 The growth of cities poses ever increasing challenges for the natural environment on which they impact and depend not only within their boundaries but also in surrounding peri urban areas Landscape ecology the study of interactions across space and time between the structure and function of physical biological and cultural components of landscapes has a pivotal role to play in identifying sustainable solutions This book brings together examples of research at the cutting edge of urban landscape ecology across multiple contexts that investigate the state maintenance and restoration of healthy and functional natural environments across urban and peri urban landscapes An

explicit focus is on urban landscapes in contrast to other books which have considered urban ecosystems and ecology without specific focus on spatial connections It integrates research and perspectives from across academia public and private practitioners of urban conservation planning and design It provides a much needed summary of current thinking on how urban landscapes can provide the foundation of sustained economic growth prospering communities and personal well being

Correlated neuronal activity and its relationship to

coding, dynamics and network architecture Tatjana Tchumatchenko, Ruben Moreno-Bote, 2014-12-03 Correlated activity in populations of neurons has been observed in many brain regions and plays a central role in cortical coding attention and network dynamics Accurately quantifying neuronal correlations presents several difficulties For example despite recent advances in multicellular recording techniques the number of neurons from which spiking activity can be simultaneously recorded remains orders magnitude smaller than the size of local networks In addition there is a lack of consensus on the distribution of pairwise spike cross correlations obtained in extracellular multi unit recordings These challenges highlight the need for theoretical and computational approaches to understand how correlations emerge and to decipher their functional role in the brain
