Plants and Snails Gizmo

Overview

You will study the production and use of gases by plants and animals by measuring the oxygen (O_2) and carbon dioxide (CO_2) levels in a test tube containing snails and elodea (a type of plant) in both light and dark conditions.

Prior Knowledge Questions

Question/Prompt	Your Response
1. What important gas do we take in when we breathe?	Oxygen.
2. Why don't we run out of the important gases that we need to stay alive?	We breathe oxygen in and out of our bodies.

Directions

Part A: Introduction

1. Open a new tab or window. Go to the [Plants and Snails Gizmo](#).
2. In the Gizmo, each of the test tubes contains water and a small amount of **bromothymol blue (BTB)**. BTB is a chemical indicator. An indicator changes color when the chemicals in the water change.

Question/Prompt	Your Response
With the lights set to on, drag a snail into one test tube and a plant into another. Press Play ().	The snail tube turned yellow and the plant tube turned blue.
3. After 24 hours, what is the color of each tube?	
Select Show O_2 and CO_2 values in the lower left hand corner of the screen. Place the O_2/CO_2 probe in the first tube then move it to the second tube. The probe shows the levels of two gases, O_2 and CO_2 , in the tubes. We call these amounts the <i>gas levels</i> .	
4. When the water turns blue, which gas is most common?	Oxygen
5. When the water turns yellow, which gas is most common?	Carbon Dioxide
6. What does it tell you when the water is green?	Both oxygen and carbon dioxide levels are even (6.0)
7. Describe the carbon dioxide-oxygen cycle by completing the sentences:	Animals breathe in [oxygen] and breathe out [carbon dioxide].
