Advancing the forest and water nexus Food and Agriculture Organization of the United Nations,2019-10-18 Forests are intrinsically linked to water forested watersheds provide 75 percent of our accessible freshwater resources Millennium Ecosystem Assessment 2005 and both forest and water resources are relevant to the achievement of all 17 Sustainable Development Goals Despite the important interlinkages the forest water nexus is often unaccounted for in policy and planning For example three

quarters of forests are not managed for soil and water conservation which poses a fundamental challenge to achieving sustainable and resilient communities and ecosystems. It is paramount to employ an integrated approach to forest and water resources in management and policy that takes into account the complexity and contextual nature of forest water relationships. To achieve this, we must improve our understanding of forest water relationships within local contexts and at different scales, as well as our ability to design, implement, and learn from landscape approaches that both rely on these forest water relationships and impact them. In this context, FAO's Forest and Water Programme has developed a module-based capacity development facilitation guide for project and community stakeholders involved in forest water and natural resource management to ensure we apply our knowledge to better manage forests and trees for their multiple benefits, including water quantity, quality, and the associated socio-economic benefits that people within and outside forests so heavily depend on.

Bridging Organization Design and Performance Gregory Kesler, Amy Kates, 2015-11-23. Five practical steps to enhance organization effectiveness on a global scale. *Bridging Organization Design and Performance* is a handbook for leaders looking to enhance the success of their organizations and themselves. Companies that compete globally require organizational operating models as robust as their strategies. Many companies have created elegant designs and consider their worldwide matrix organizations sources of competitive advantage. However, the reality is that these complex structures bring many challenges, and senior executives are often frustrated by the difficulties of delivering growth in organizations that span numerous brands, products, and geographic regions. After working closely with over twenty large US and Europe-based global companies during the past decade, Gregory Kesler and Amy Kates concluded that the problem is not in the fundamental design of these operating models. The matrix is not going away. The challenge is to effectively and completely activate the organization to deliver the strategy. This book shares the five practical actions that bring complex organizations to life and help companies gain sustainable results from their global operating models.
