of executive function and an expanding body of research has shown that executive function develops rapidly during the preschool years with adult level performance being achieved during adolescence or later. This recent work together with experimental research showing the effects of interventions targeting executive function has yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function however and the multiplicity of underlying processes there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods including behavioral experiments, neuroimaging, eye tracking, computer simulation, observational methods and questionnaires are encouraged to contribute original empirical research. In addition to original empirical articles, theoretical reviews and opinion perspective articles on promising future directions are welcome. We hope that researchers from different areas such as developmental psychology, educational psychology, experimental psychology, neuropsychology, neuroscience, psychiatry, computational science etc. will be represented in the Research Topic.

This was the fourth time that the two workshops were held back to back. The SSPR was the tenth International Workshop on Structural and Syntactic Pattern Recognition and the SPR was the fifth International Workshop on Statistical Techniques in Pattern Recognition. These workshops have traditionally been held in conjunction with ICPR International Conference on Pattern Recognition and are the major events for technical committees TC2 and TC1 respectively of the International Association for Pattern Recognition IAPR. The workshops were closely coordinated being held in parallel with plenary talks and a common session on hybrid systems. This was an attempt to resolve the dilemma of how to deal with the need for narrow focus specialized workshops yet accommodate the presentation of new theories and techniques that blur the distinction between the statistical and the structural approaches. A total of 219 papers were received from many countries with the submission and reviewing processes being carried out separately for each workshop. A total of 59 papers were accepted for oral presentation and 64 for posters. In addition four invited speakers presented informative talks and overviews of their research. They were Alberto Sanfeliu from the Technical University of Catalonia Spain, Marco Gori from the University of Siena Italy, Nello Cristianini from the University of California USA and Erkki Oja from Helsinki University of
