The Tectonic Setting and Origin of Cretaceous Batholiths within the North American Cordillera Robert S. Hildebrand, Joseph B. Whalen, 2017-10-03 In this Special Paper Hildebrand and Whalen present a big picture paradigm busting synthesis that examines the tectonic setting temporal relations and geochemistry of many plutons within Cretaceous batholithic terranes of the North American Cordillera In addition to their compelling tectonic synthesis they argue that most of the batholiths are not products of arc magmatism as commonly believed but instead were formed by slab failure during and after collision They show that slab window and Precambrian TTG suites share many geochemical similarities with Cretaceous slab failure rocks Geochemical and isotopic data indicate that the slab failure magmas were derived dominantly from the mantle and thus have been one of the largest contributors to growth of continental crust The authors also note that slab failure plutons emplaced into the epizone are commonly associated with Cu Au porphyries as well as Li Cs Ta pegmatites
