- There is a large area of undeveloped natural beauty. (Additional comments on physical and ecological topics. E.g. South is mountainous - some 1,500 ft. but not everywhere - in fact flat-bottomed. Other comments. But forests were everywhere and would not be destroyed here. The large tract is not small. Perhaps 100,000 - 200,000 acres. Forests were a big attraction - a great attraction. Forests were a big attraction.)

of Science Andrew Gregory, 2015-03-02 In this illuminating book Andrew Gregory takes an original approach to Plato's philosophy of science by reassessing Plato's views on how we might investigate and explain the natural world He demonstrates that many of the common charges against Plato disinterest ignorance dismissal of observation are unfounded and shows instead that Plato had a series of important and cogent criticisms to make of the early atomists and other physiologists Plato's views on science and on astronomy and cosmology in particular are shown to have developed in interesting ways Thus the book argues Plato can best be seen as a philosopher struggling with the foundations of scientific realism and as someone moreover who has interesting epistemological cosmological and nomological reasons for his approach Plato's Philosophy of Science is important reading for all those with an interest in Ancient Philosophy and the History of Science **Thirty Years of Linguistic Evolution** Martin Pütz, 1992-01-01 Selección de estudios históricos sobre los problemas que han dominado la Lingüística en la segunda mitad del siglo XX y sus áreas afines tales como el análisis gramatical la semántica la morfología y la denominada sociolingüística
