Senior,2013-06-29 Starting with fingerprints more than a hundred years ago there has been ongoing research in biometrics Within the last forty years face and speaker recognition have emerged as research topics However as recently as a decade ago biometrics itself did not exist as an independent field Each of the biometric related topics grew out of different disciplines For example the study of fingerprints came from forensics and pattern recognition speaker recognition evolved from signal processing the beginnings of face recognition were in computer vision and privacy concerns arose from the public policy arena One of the challenges of any new field is to state what the

core ideas are that define the field in order to provide a research agenda for the field and identify key research problems Biometrics has been grappling with this challenge since the late 1990s With the maturation of biometrics the separate biometrics areas are coalescing into the new discipline of biometrics The establishment of biometrics as a recognized field of inquiry allows the research community to identify problems that are common to biometrics in general It is this identification of common problems that will define biometrics as a field and allow for broad advancement

The Science of Bureaucracy David Demortain, 2020-01-21 How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy
