that they do not rely on human intervention which would then allow them to be inserted as components into information processing networks The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis Self organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically *Initial Reports of the Deep Sea Drilling Project* Scripps Institution of Oceanography, 1969 AI*IA 2013: Advances in Artificial Intelligence Matteo Baldoni, Cristina Baroglio, Guido Boella, Roberto Micalizio, 2013-12-09 This book constitutes the refereed proceedings of the 13th International Conference of the Italian Association for Artificial Intelligence AI IA 2013 held in Turin Italy in December 2013 The 45 revised full papers were carefully reviewed and selected from 86 submissions The conference covers broadly the many aspects of theoretical and applied Artificial Intelligence as follows knowledge representation and reasoning machine learning natural language processing planning distributed AI robotics and MAS recommender systems and semantic Web and AI applications **Computational Argumentation: a Foundation for Human-centric AI** Antonis Kakas, Loizos Michael, Emmanuelle Dietz, 2024-11-19 Human centric AI aims at designing and developing systems that operate along with humans in a cognitively compatible and synergetic way Such systems are required to exhibit human like cognitive abilities and intelligence either at the general level of the human population or at some specialized level of expertise in a specific field In either case human centric AI systems exist as expert companions or peers of their human users that would operate alongside them to support and enhance their capabilities *Simulated Evolution and Learning* Bob McKay, Xin Yao, Charles S.
