Heckel,George R. Holmes,1991-09-30 This book offers a health oriented integrative approach to adolescent group therapy George R Holmes and his associates believe that promoting social competency in each adolescent group member is central to successful therapy The enablement of interpersonal skills neutralizes the environmentally sponsored psychopathology that adolescents use to survive The authors also emphasize the co therapy relationship They offer recommendations for supervising trainee therapists and for applying their model to other contexts such as high schools The authors discuss strategies developed in their clinical work covering such issues as scapegoating silence and withdrawal They explore how processes roles and meaningful issues change over the life of the group Social competency should be the main focus they argue it is essential to nurturing self parenting skills and a healthy identity The co therapy relationship the interaction between co therapists and among co therapists and group members also greatly determines therapeutic change The book includes recommendations for supervising trainee therapists and for applying this model to other contexts such as high schools *Adolescent Group Therapy* will be of interest to students and to teachers and professionals in psychology counseling vocational rehabilitation social work nursing education and child and adolescent psychiatry      **Handbook of Behavioral Group Therapy** Dennis Upper,Steven M. Ross,2013-11-11 In 1977 the current editors contributed a review article on behavioral group therapy to a volume of Hersen Miller and Eisler s *Progress in Behavior Modification* series 1977 At that time we noted that despite the advantages to both clinicians and clients of conducting behavioral treatments in groups clinical developments and research in this area were still at a relatively rudimentary level The majority of studies in the behavioral group therapy literature we reviewed reported the direct transfer of an individual behavior therapy procedure such as systematic desensitization to a group of clients with homogeneous problems such as snake phobia or test anxiety Groups were used in many studies merely to generate sufficient numbers of subjects to allow various types of interventions to be compared rather than to examine group process variables per se Only a limited amount of attention had been given to

whether these group interaction variables such as group discussion sharing ideas and feelings and mutual feedback and reinforcement might enhance individually oriented procedures applied in a group The 8 years since this original chapter was written have seen a significant growth in both the breadth and depth of clinical research and work in the behavioral group therapy field This growth was documented in part in a three volume series on behavioral group therapy by the current editors Upper Ross 1979 1980 1981
