
Maternity HESI Case Study Questions with correct answers

A 28-year-old G1 P0 client who is currently 32 weeks pregnant is started on IV magnesium sulfate after being diagnosed with severe preeclampsia. After determining the serum magnesium level to be 15 mEq/L, the nurse should expect which of the following manifestations in the client?

ECG changes.

Loss of reflexes.

Respiratory distress.

Cardiac arrest. - CORRECT ANSWERS-Respiratory distress

--> The therapeutic level of magnesium sulfate is 4 to 7 mEq/L. ECG changes occur at 5 to 10 mEq/L. Loss of reflexes is unavoidable at 8 to 12 mEq/L. At 15 mEq/L, the client may experience respiratory distress. At 25 mEq/L, cardiac arrest may occur.

A 30-year-old gravida 2, para 1 client is admitted to the hospital at 26-weeks gestation in preterm labor. She is started on an IV solution of terbutaline (Brethine). Which assessment is the highest priority for the nurse to monitor during the administration of this drug?

Maternal blood pressure and respirations.

Maternal and fetal heart rates.

Hourly urinary output.

Deep tendon reflexes. - CORRECT ANSWERS-Maternal and fetal heart rates.

--> Terbutaline has effects on receptors. It acts as a sympathomimetic agent stimulating beta 1 receptors which cause tachycardia as a side effect and that is a reason why monitoring maternal and fetal heart rates is most important when terbutaline is being administered. It also affects beta 2 receptors which relaxes the uterus and that is the reason for its administration.

Newborn Hesi Case Study

S Ashworth

Newborn Hesi Case Study:

Tell el-Hesi Lawrence E. Toombs, 1985-10-31 Tell el Hesi located in southern Israel at the juncture of the Negev Desert and the foothills of the Judean Mountains provides an excellent opportunity for the archaeological study of the impact of a variety of physical environments on the peoples who inhabited a single site. The site has been occupied at various times from the Early Bronze Age through to the military trenching of 1948. Level one revealed the modern military trenching. Level two contained a Muslim cemetery that the author has dated to the period 1600-1800 A.D. This work analyzes the military trenching and provides the first statistical analysis of an entire cemetery in this geographic region. Using a computer code to analyze numerous attributes describing the burial cysts, skeletal data and grave goods, the author has developed a typology of burials and drawn conclusions about the community which they represent. More than eighty photographs of individual burials and burial goods, in addition to tables, plans and section drawings, illustrate the text. The methodology employed in this work makes it a valuable source of information for archaeologists investigating burials in any cultural context. The broader audience of anthropologists interested in burial customs will also find the book useful.
