Palacios, Andrea J. Vander Woude, 2022-11-08 *Fundamentals of Tropical Freshwater Wetlands* Tatenda Dalu, Ryan J. Wasserman, 2021-11-25 *Fundamentals of Tropical Freshwater Wetlands From Ecology to Conservation* Management is a practical guide and important tool for practitioners and educators interested in the ecology conservation and management of wetlands in tropical subtropical regions The book is written in such a way that in addition to scientists and managers it is accessible to non specialist readers Organized into three themed sections and twenty three chapters this volume covers a variety of topics exposing the reader to a full range of scientific conservation and management issues Each chapter has been written by specialists in the topic being presented The book recognizes that wetland conservation science and management are interlinked disciplines and so it attempts to combine several perspectives to highlight the interdependence between the various professions that deal with issues in these environments Within each chapter extensive cross referencing is included so as to help the reader link related aspects of the issues being discussed Contributed to by global experts in the field of tropical wetlands Includes case studies and worked examples enabling the reader to recreate the work already done Focuses on tropical systems not available in any other book *Photosynthesis Under Fluctuating Light* Michele Grieco, Fiamma Longoni, Stefano Santabarbara, Jeremy Harbinson, 2023-06-27 Photosynthesis is a fundamental process that drives almost all life on Earth and is the motor of agriculture and food production For several decades its basic functioning has been investigated mainly at steady state under constant illumination This approach was necessary to understand the basic mechanisms underlying the light reactions and carbon assimilation However this condition does not reflect the natural environment where plants experience changes in both the intensity and spectrum of irradiance in a wide range of time scales spanning from seconds to several hours In recent years it has become clear that the processes allowing the photosynthetic apparatus to adapt to changes in irradiance are of paramount importance to plant fitness and productivity Therefore increased research effort has been directed towards studying the regulation of photosynthetic activity under fluctuating light i e upon the variation of light intensity or light spectrum This is important for understanding how photosynthetic organisms cope with natural environmental conditions Fluctuating light itself constitutes a potentially stressful condition because depending on the scale of the fluctuation it can transiently generate extreme redox and transthylakoid potentials and forces the photosynthetic machinery to be re adjusted Not surprisingly plants have evolved several mechanisms allowing a prompt response to these normal environmental events In natural environments photosynthetic organisms often have to cope with fluctuating light while experiencing other kinds of stress such as heat

nutrient deficiency drought and pathogen attacks Therefore the study of combined stresses is essential for understanding the acclimation to realistic environmental conditions *Plant Adaptations to Phosphate Deficiency* Alex Joseph Valentine,Alejandra Zúñiga-Feest,Aleysia Kleinert,Pablo Cornejo,Vagner A. Benedito,2021-05-18 Phosphate is an essential mineral to all plants and its availability in soils is an increasing challenge for agriculture Phosphate is abundant in soils but its biological availability is often low due to the complexes that it forms with soil minerals and compounds The biological availability of Phosphate is further reduced in acidic soils which represent approximately 40% of earth s arable agricultural lands Agricultural systems compensate Phosphate deficiency with fertilizers coming from the mining of rock phosphate which is estimated to exhaust within the next 50 years For these reasons Phosphate limitations in natural and agricultural ecosystems is going to become a global problem and we urgently need to better understand how plants respond to Phosphate deficiency **Advances in sea state modeling and climate change impacts** Adem Akpınar,Giovanni Besio,Bahareh Kamranzad,2023-04-04 Metabolic Regulation of Diatoms and Other Chromalveolates Benoit Schoefs,Hanhua Hu,Justine Marchand,Kalina M.
