Instructions: Choose one performance task. Write all your work on a separate clean piece of paper and attach it to this page.

Big Idea: Reasoning and Proof

You can use triangle congruence theorems to prove relationships among tangents and secants.

Performance Task 1

Four tangents are drawn from E to two concentric circles. A , B , C , and D are the points of tangency. Name as many pairs of congruent triangles as possible and tell how you can show each pair is congruent.

Big Idea: Measurement

You can use facts about arcs and angle measures to solve real-world problems.

Performance Task 2

The rocks near the shore between two lighthouses at points A and B make the waters unsafe. The measure of $\widehat{AXB}$ is 300° . Waters inside this arc are unsafe. Suppose you are a navigator on a ship at sea. How can you use the lighthouses to keep the ship in safe waters? Explain your answer.

Big Idea: Coordinate Geometry

You can use coordinates of the center of a circle and its radius to write an equation of a circle.

Performance Task 3

A gardener wants the three rosebushes in her garden to be watered by a rotating water sprinkler. The gardener draws a diagram of the garden using a grid in which each unit represents 1 ft. The rosebushes are at $(1,3)$, $(5,11)$, and $(11,4)$. She wants to position the sprinkler at a point equidistant from each rosebush. Where should the gardener place the sprinkler? Show your work. What equation described the boundary of the circular region that the sprinkler will cover?

Advances in Flow Research Stefan

Engeser, 2012-03-20 The concept of Flow was first explained by Csikszentmihalyi 1975 described as an optimal experience he noted that artists were entirely caught up in their projects working feverishly to finish them and then lose all interest in their work after completion The incentive lies in the act of creativity itself The person feels optimally challenged while totally immersed in the activity At the heart of flow research is the motivational aspect of this experience Flow motivates people to carry out certain activities repeatedly seeking a challenge in the act and looking to improve their skills and abilities In this book this motivational aspect will be imbedded in and related to other theories of intrinsic motivation and empirical work on flow and performance The book provides a review of the current flow research with a focus on rigorous analysis on methodology The author takes the time to present methodological aspects in flow research to qualify empirical work In addition this volume presents neuropsychological considerations and empirical correlates of flow experiences The work also describes various theoretical integrations of the different paths being taken within the field of flow research It presents what
