Climate Change Discourse in Russia Marianna

Poberezhskaya, Teresa Ashe, 2018-08-06 This book explores the development of climate change discourses in Russia It contributes to the study of climate change as a cultural idea by developing the extensive Anglophone literature on environmental science politics and policy pertaining to climate change in the West to consider how Russian discourses of climate change have developed Drawing on contributors specialising in numerous periods regions disciplines and topics of study the central thread of this book is the shared attempt to understand how environmental issues particularly climate change have been understood investigated and conceptualised in Soviet and post Soviet Russia The chapters aim to complement work on the history of the discursive political construction of climate change in the West by examining a highly contrasting but intimately related cultural context Russia remains one of the world s largest greenhouse gas emitters with one of the most carbon intensive economies As the world begins to suffer the extreme consequences of anthropogenic climate change finding adequate solutions to global environmental problems necessitates the participation of all countries Russia is a central actor in this global process and it therefore becomes increasingly important to understand climate change discourse in this region Insights gained in this area may also be illuminating for examining environmental discourses in other resource rich regions of the world with alternative economic and political experiences to that of the West e g China Middle East This book will be of great interest to students and scholars of Russian environmental policy and politics climate change discourses environmental communication and environment and sustainability in general *The Soviet Union and Global Environmental Change* Jonathan D. Oldfield, 2021-05-26 This book argues that the Soviet Union was a highly influential actor in furthering understandings of society nature interaction on the international stage and played a key role in helping to shape conceptualize and assess the relationship between humankind and the Earth system It considers how humankind s capacity to affect physical and biological systems at a global scale was acknowledged and studied by Soviet scientists discusses how the interaction between Soviet and Western scientists stimulated the development of new technologies and insights which simultaneously facilitated a more profound understanding of the Earth s physical and biological systems and explores how Soviet scientists drew upon pre revolutionary intellectual traditions in order to make sense of society nature interaction and did so in collaboration with a range of international initiatives Overall the book provides a deep analysis of how Soviet scientists conceptualized society nature interaction and influenced the understanding of global physical and biological systems Furthermore it is argued that this intellectual legacy remains of importance today with respect to the activities of Russian science and contemporary global environmental challenges **Grain World** ,1928 **Climate Change and Air Pollution** Rais Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate change air

pollution and human health scenarios The research from both industrialized and developing countries focuses on region specific perspectives of climate change impacts on air pollution After analyzing the variations of climate data over recent decades the authors consider the different effects of climate change on air pollution and health As stressed by the IPCC pollen smoke and ozone levels are likely to increase in a warming world affecting the health of residents of major cities Rising temperatures will worsen air quality through a combination of more ozone in cities bigger wild fires and worse pollen outbreaks according to a major UN climate report The report follows the World Health Organization in finding that air pollution is the world s greatest environmental health risk killing 7 million people in 2014 compared to 0 4 million deaths due to malaria Deteriorating air quality will most affect the elderly children people with chronic ill health and expectant mothers Another report suggests that more than 5 5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India A study on the air pollution in the USA suggests that more than half of US population lives in areas with potentially dangerous air pollution and about six out of 10 of the top cities for air pollution in the USA are located in the state of California In the face of future climate change scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems especially in more populated regions of the world It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution Additionally the authors consider the various measures that different countries and groups of countries like the European Union have adopted to mitigate the problems arising from climate change and to safeguard the health of population The book examines the increasing incidence of diseases largely caused by climate change The countries regions covered in this study include the USA Northern Europe U K Southern Europe Italy Canada Australia East Asia Russia Hong Kong Taiwan Thailand Malaysia Indonesia India South Africa Mexico Brazil Caribbean countries and Argentina

Encyclopedia of Global Warming and Climate Change, Second Edition S. George Philander, 2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively

Russia's Arctic Strategies and the Future of the Far North Marlene Laruelle, 2015-01-28 This book offers the first comprehensive examination of Russia's Arctic strategy ranging from climate change issues and territorial disputes to energy policy and domestic challenges As the receding polar ice increases the accessibility of the Arctic region rival powers have been manoeuvring for geopolitical and resource security Geographically Russia controls half of the Arctic coastline 40 percent of the land area beyond the Circumpolar North and three quarters of the Arctic population In total the sea and land surface area of the Russian Arctic is about 6 million square kilometres Economically as much as 20 percent of Russia's GDP and its total exports is generated north of the Arctic Circle In terms of resources about 95 percent of its gas 75 percent of its oil 96 percent of its platinum 90 percent of its nickel and cobalt and 60 percent of its copper reserves are found in Arctic and Sub Arctic regions Add to this the riches of the continental shelf seabed and waters ranging from rare earth minerals to fish stocks After a spike of aggressive rhetoric when Russia planted its flag in the Arctic seabed in 2007 Moscow has attempted to strengthen its position as a key factor in developing an international consensus concerning a region where its relative advantages are manifest despite its diminishing military technological and human capacities

Historical Perspectives on Climate Change James Rodger Fleming, 2005-07-14 This intriguing volume provides a thorough examination of the historical roots of global climate change as a field of inquiry from the Enlightenment to the late twentieth century Based on primary and archival sources the book is filled with interesting perspectives on what

people have understood experienced and feared about the climate and its changes in the past Chapters explore climate and culture in Enlightenment thought climate debates in early America the development of international networks of observation the scientific transformation of climate discourse and early contributions to understanding terrestrial temperature changes infrared radiation and the carbon dioxide theory of climate But perhaps most important this book shows what a study of the past has to offer the interdisciplinary investigation of current environmental problems *The Current Business Cyclopedia*,1917

Joint Operational Warfare Milan N. Vego,2009 Smallholder farmers and pastoralists fulfil an invaluable yet undervalued role in conserving biodiversity They act as guardians of locally adapted livestock breeds that can make use of even marginal environments under tough climatic conditions and therefore are a crucial resource for food security But in addition by sustaining animals on natural vegetation and as part of local ecosystems these communities also make a significant contribution to the conservation of wild biodiversity and of cultural landscapes This publication provides a glimpse into the often intricate knowledge systems that pastoralists and smallholder farmers have developed for the management of their breeds in specific production systems and it also describes the multitude of threats and challenges these often marginalized communities have to cope with *Science* John Michels (Journalist),1914

Food and Agricultural Policy in Russia Csaba Csáki,2002-01-01 The agricultural sector in Russia has considerable untapped productive potential Given this potential agriculture could provide a solid foundation for growth and poverty alleviation particularly in rural areas of Russia The objectives of this book are to facilitate debate of issues key to agricultural policy to contribute to a greater understanding of the Russian agricultural sector outside of Russia and to identify a framework for further collaboration between the Russian government and the World Bank in the rural sector

Bulletin of the American Meteorological Society American Meteorological Society,1928 List of members in v 1 8 etc *Nature in Literary and Cultural Studies* Catrin Gersdorf,Sylvia Mayer,2006 Nature in Literary and Cultural Studies is a collection of essays written by European and North American scholars who argue that nature and culture can no longer be thought of in oppositional mutually exclusive terms They are united in an effort to push the theoretical limits of ecocriticism towards a more rigorous investigation of nature s critical potential as a concept that challenges modern culture s philosophical assumptions epistemological convictions aesthetic principles and ethical imperatives This volume offers scholars and students of literature culture history philosophy and linguistics new insights into the ongoing transformation of ecocriticism into an innovative force in international and interdisciplinary literary and cultural studies

Sense of Place and Sense of Planet Ursula K. Heise,2008-09-29 Sense of Place and Sense of Planet analyzes the relationship between the imagination of the global and the ethical commitment to the local in environmentalist thought and writing from the 1960s to the present Part One critically examines the emphasis on local identities and communities in North American environmentalism by establishing conceptual connections between environmentalism and ecocriticism on one hand and theories of globalization transnationalism and

cosmopolitanism on the other It proposes the concept of eco cosmopolitanism as a shorthand for envisioning these connections and the cultural and aesthetic forms into which they translate Part Two focuses on conceptualizations of environmental danger and connects environmentalist and ecocritical thought with the interdisciplinary field of risk theory in the social sciences arguing that environmental justice theory and ecocriticism stand to benefit from closer consideration of the theories of cosmopolitanism that have arisen in this field from the analysis of transnational communities at risk Both parts of the book combine in depth theoretical discussion with detailed analyses of novels poems films computer software and installation artworks from the US and abroad that translate new connections between global national and local forms of awareness into innovative aesthetic forms combining allegory epic and views of the planet as a whole with modernist and postmodernist strategies of fragmentation montage collage and zooming
