

Average Atomic Mass

How can the masses of the particles tell us something?

Why?

Many different types of atoms show up naturally in our lives around us. For example, hydrogen, the lightest of them, is everywhere. Even the water around us is made up of hydrogen. Hydrogen atoms are found in the nuclei of almost all particles. Looking closely at particles, finding them to have different masses, scientists found something very interesting. Some particles are made of just one type of particle while others are made of more than one type of particle. For example, some particles are made of two particles, some are made of three particles, and some are made of four particles.
