Handbook of Mineral Spectroscopy, Volume 2 J. Theo Kloprogge, 2023-04-22 Handbook of Mineral Spectroscopy Volume Two Infrared Spectra a Four Volume Set presents a database of Infrared spectra showing both full spectra and high resolution spectral regions with band component analyses of rock forming and major ore minerals IR of minerals is a very powerful technique for analyzing the different vibrational modes of minerals in particular functional groups but also the local environment of atoms in a crystal structure The book includes a section on silicates and one on non silicates subdivided according to the normal mineral classes This book is a go to guide for anyone working with minerals and can be used for research and writing or as a handbook in the laboratory while running analyses of minerals Features 2 500 full color Infrared Spectra for use by researchers in the lab and as a reference Includes band component analyses of the spectral regions of interest for each mineral Written by an expert with more than 25 years of mineral spectroscopy experience **Proceedings of the 1st International Conference on Recent Advancements in Materials Science and Technology, Volume I** P. Sakthivel, Mangalaraja Ramalinga Viswanathan, K. Ravichandran, 2024-12-26 This book presents peer reviewed and selected papers from the 1st International Conference on Recent Advancements in Materials Science and Technology held at Karpagam Academy of Higher Education in Coimbatore India on 29 30 January 2024 Experts across the world share the latest developments in their respective fields within materials science including nanomaterials biomaterials optical materials construction materials composite materials and more Additionally addressing sustainability and the importance of international collaboration this book serves as an up to date and effective resource for researchers academics industrialists and students looking to understand the state of numerous materials science subfields *Developments in Strategic Ceramic Materials II* Waltraud M. Kriven, Jingyang Wang, Yanchun Zhou, Dongming Zhu, Gustavo Costa, 2017-01-31 This issue contains 27 papers from The American Ceramic Society's 40th International Conference on Advanced Ceramics and Composites held in Daytona Beach Florida January 24 29 2016 This issue includes papers presented in the following Symposia and Focused Sessions Symposium 2 Advanced Ceramic Coatings for Structural Environmental and Functional Applications Symposium 10 Virtual Materials Computational Design and Ceramic Genome Symposium 11 Advanced Materials and Innovative Processing Ideas for the Industrial Root Technology Symposium 12 Materials for Extreme Environments Ultrahigh Temperature Ceramics and Emerging Technologies Symposium Carbon Nanostructures and Focused Session 1 Geopolymers and Chemically Bonded Ceramics **Biodegradation of Plastics** Zhanyong Wang, Fan Li, Amer Ali Shah, Ken'ichiro Matsumoto, Martin Koller, 2023-11-21 The consumption of plastic products has increased significantly with the rapid development of the global economy The total output of virgin plastics has already reached eight billion tons and the annual global plastic consumption has reached 2 8 billion tons In parallel with this high consumption rate a staggering amount of plastic waste is generated annually As a consequence of incorrect disposal of waste plastics and plastic longevity this plastic

waste is accumulating in the environment at an increasing rate Moreover since most plastic waste is corrosion resistant these plastics do not decompose in the natural environment and can cause serious environmental pollution In particular petroleum based synthetic polymers including polyethylene polyvinyl chloride polystyrene polypropylene polyethylene terephthalate and polyurethanes need hundreds of years to completely degrade in the natural environment Moreover although some aliphatic polyesters such as polybutylene succinate polycaprolactone and polylactic acid are considered biodegradable degradation of these plastics occurs only under specific microorganism activity and under specific conditions Sometimes the apparent degradation is initiated by hydrolytic activity and not microorganism or enzymatic activity Large scale synthesis and application of plastics only began after 1950 Hence the time span of plastic exposure in the environment has been too short for the adaptive evolution of natural microorganisms Indeed natural microorganisms showing high specificity for plastics and a high degradation efficiency are extremely scarce Because of the inability of most natural microorganisms to recognize and degrade plastics enzymes that can specifically degrade plastics are also scarce Many of the enzymes which are known have either an unclear mechanism of the action on the polymer a poor affinity for their substrates a low efficiency or enzyme production yield is currently low To address these problems new biotechnology strategies need to be implemented In particular new microorganisms and their enzymes need to be identified and pathways for plastic degradation and molecular modification need to be clarified to enhance the activity and stability of the degrading enzymes The current Research Topic aims to cover the recent and novel research trends in the development of plastics biodegradation including petroleum based plastics and bio based plastics under soil composted microbial and enzymatic conditions The recycling technology of degraded products is also of interest

Advances in Glass Science and Technology Vincenzo Maria Sglavo, 2018-06-06 In this book some recent advances in glass science and technology are collected In the first part the structure and crystallization of innovative glass compositions are analysed In the second part innovative applications are described from the use of glass in optical devices and lasers to fibres in composites micropatterned components in sensors and microdevices beads in building walls and sealing in solid oxide fuel cells

Polymeric Systems as

Antimicrobial or Antifouling Agents Antonella Piozzi,Iolanda Francolini,2020-05-22 The rapid increase in the emergence of antibiotic resistant bacterial strains combined with a dwindling rate of discovery of novel antibiotic molecules has created an alarming issue worldwide Although the occurrence of resistance in microbes is a natural process the overuse of antibiotics is known to increase the rate of resistance evolution Under antibiotic treatment susceptible bacteria inevitably die while resistant microorganisms proliferate under reduced competition Therefore the out of control use of antibiotics eliminates drug susceptible species that would naturally limit the expansion of resistant species In addition the ability of many microbial species to grow as a biofilm has further complicated the treatment of infections with conventional antibiotics A number of corrective measures are currently being explored to reverse or slow antibiotic resistance evolution Among which one of the most promising solutions is the development of polymer based antimicrobial compounds In this Special Issue different polymer systems able to prevent or treat biofilm formation including cationic polymers antibacterial peptide mimetic polymers polymers or composites able to load and release bioactive molecules and antifouling polymers able to repel microbes by physical or chemical mechanisms are reported Their applications in the design and fabrication of medical devices in food packaging and as drug carriers is investigated [11th International Conference on Materials Science \(ICMS\)](#) Jav Davaasambuu,2024-10-24 Selected peer reviewed extended articles based on abstracts presented at the 11th International Conference on Materials Science ICMS 2023 Aggregated Book [Luminophores and Resistant Materials](#) Yurii Otrosh,Jav Davaasambuu,2024-10-07 Special topic volume with invited peer reviewed papers only
