The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013) Michael Durant Thomas, 2017-07-25. This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security. Drawing on established securitisation frameworks, Copenhagen and Paris Schools, the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3,500 speeches, policies and doctrinal articles since 2003. Importantly, the author undertakes an examination of the intersection between the political and the military spheres, probing the question of how ideology has influenced the military's uptake on the issue. In this context, the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper-political issue and an unprecedented security threat. A close examination of the key political actors, their intent, outlook and political mandate for broader climate action is therefore crucial to understanding the policy freedom and constraints within which military leaders operate. The book consists of eight chapters divided into four parts focusing on perspectives and methodological insights, empirical case studies, case study comparison and concluding observations. Offers a rare and systematic examination of military climate policy by a military officer from Australia. Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration. Develops a unique method that quantifies climate security, enabling a graphical representation for quick and ready reference, ideally suited to policy makers.

Making a fresh contribution to the political history of science, this book explores the connections between the science policies of three countries that each experienced considerable political upheaval in the twentieth century: Spain, Italy and Argentina. By focussing on these three countries, the contributors are able to present case studies that highlight the characteristics and specificities of the democratic and dictatorial political processes involved in the production of science and technology. The focus on dictatorship presents the opportunity to expand our knowledge beyond the more extensive literature about science in Nazi Germany and Stalinist

USSR about the level of political involvement of scientists in non democratic contexts and to what extent they act as politicians in different contexts Key topics covered include the new forms of organization and institutionalization of science in the twentieth century the involvement of scientific communities in the governance of science and its institutions the role of ideology in scientific development the scientific practices adopted by scientific communities in different contexts and the characteristics of science and technology produced in these contexts
