Fundamental Questions in Astrophysics: Guidelines for Future UV Observatories Ana I. Gómez de Castro, Willem Wamsteker, 2007-01-30 Modern astrophysics is a mature science that has evolved from its early phase of discovery and classification to a physics oriented discipline focused on finding answers to fundamental problems ranging from cosmology to the origin and diversity of life sustainable systems in the Universe For this very reason progress of modern astrophysics requires access to the electromagnetic spectrum in the broadest energy range The Ultraviolet is a fundamental energy domain since it is one of the most powerful tools to study plasmas at temperatures in the 3 000 300 000 K range as well as electronic transitions of the most abundant molecules in the Universe Moreover the UV radiation field is a powerful astrochemical and photoionizing agent This book describes the fundamental problems in modern astrophysics that cannot progress without easy and wide spread access to modern UV instrumentation

Matter and Interactions Ruth W. Chabay, Bruce A. Sherwood, 2011 Matter and Interactions offers a modern curriculum for introductory physics calculus based It presents physics the way practicing physicists view their discipline and integrates 20th Century physics and computational physics The text emphasizes the small number of fundamental principles that underlie the behavior of matter and models that can explain and predict a wide variety of physical phenomena Matter and Interactions will be available as a single volume hardcover text and also two paperback volumes
