in Childhood by Dr Amanda Sullivan Ph D explores the various social cultural and psychological reasons behind the persistent gender disparity between men and women in STEM fields By explaining the powerful role of stereotypes the media and experiences with peers and adults during the foundational early childhood years this book builds the case of early childhood being a critical time in development to reach girls Breaking the STEM Stereotype is set up in three parts Part 1 provides the current state of the gender divide in each aspect of STEM and explores why early childhood is a critical time to address this divide Part 2 explores gender identity development and gender stereotypes as well as the influences of the media advertising and adult and peer role models on young children Finally Part 3 arms readers with the knowledge they need to dispel gender stereotypes in STEM It provides suggestions on tools technologies and kits that can be used with young girls beginning in pre kindergarten It provides materials needed to design effective curricula and activities to engage girls with STEM in playful ways that build on their personal interests *The Kindergarten-primary Magazine* Bertha Johnston,E. Lyell Earle,1919

*The Kindergarten-primary Magazine* ,1909 *The Dewey School* Anna Edwards,2017-07-05 This book talks of perhaps one of the greatest education experiments in the history of America In 1894 John Dewey moved his position as Chairman of the Philosophy Department at the University of Michigan to assume the position as Chairman of the Department of Philosophy Psychology and Pedagogy at the University of Chicago He would remain there until 1904 his departure prompted in great part by his dissatisfaction regarding his wife s treatment by the administration in her role of principal of the Laboratory School At this time Dewey was anxious to translate his more abstract ideas into practical form and he saw the position at Chicago affording him a rare opportunity to do this The school itself was conceived by Dewey as having an organic functional relation to the theoretical curriculum Just as Dewey was anxious to merge philosophy and psychology and to relate both of these disciplines to the theoretical study of education similarly he saw the school as a laboratory for these studies analogous to the laboratory used in science courses This effort to merge theory and practice is perhaps the major characteristic of Dewey s entire professional career In the opening sentence of Dewey s remarks in his essay in this volume The Theory of the Chicago Experiment we see the extent to which this problem preoccupied him The gap between educational theory and its execution in practice is always so wide that there naturally arises a doubt as to the value of any separate presentation of purely theoretical principles This book is an accurate and detailed account of one of the most interesting experiments ever undertaken in America It provides the reader with the complexity of John Dewey s abstract philosophy experimentalism **Kindergarten Review** ,1912 **Science Literacy in Primary Schools and Pre-Schools** Haim Eshach,2006-08-12 Science is more than a compilation of facts and figures although one would not know that from observing classroom lessons in science in elementary schools in many parts of the world In fact there are those who argue that science is not appropriate subject content for the early grades of elementary school There are many schools in which science is simply not present in the earliest grades Even where science is taught in the earliest grades it is often a caricature

of science that is presented to the children This book offers a vigorous reasoned argument against the perspective that science doesn't belong in the early grades It goes beyond that in offering a view of science that is both appropriate to the early grades and faithful to the nature of the scientific enterprise Dr Eshach is not a voice in the chorus that claims young children's developmental lack of readiness for such study He believes as do I that in order to learn science one must do science At the heart of the doing of science is the act of exploration and theory formation To do science we must explore the ways in which the world around us looks sounds smells feels and behaves      **Kindergarten Primary Magazine** ,1909
