Search Stefan Weitz, 2016-11-03 Search is as old as language We've always needed to find something in the jumble of human creation The first web was nothing more than passing verbal histories down the generations so others could find and remember how not to get eaten the first search used the power of written language to build simple indexes in printed books leading to the Dewey Decimal system and reverse indices in more modern times Then digital happened Besides having profound societal impacts it also made the act of searching almost impossibly complex for both engines and searchers Information isn't just words it is pictures videos thoughts tagged with geocode data routes physical world data and increasingly the machines themselves reporting their condition and listening to others *Search How the Data Explosion Makes Us Smarter* holds up a mirror to our time to see if search can keep up Author Stefan Weitz explores the idea of access to help readers understand how we are inventing new ways to search and access data through devices in more places and with more capabilities We are at the cusp of imbuing our generation with superpowers but only if we fundamentally rethink what search is how people can use it and what we should demand of it *Search How The Data Explosion Makes Us Smarter* is the first title from GreenHouse Collection Created by the founders of Insight Labs the world's first philanthropic think tank GreenHouse Collection features books that encourage deeper exploration and inquiry to inform new models for social good *The Lost History of "Talking to Computers"* William Meisel, 2025-03-17 Much science fiction has humans talking to computers an early example being HAL in the movie 2001 in 1968 That vision motivated many people to attempt making the imagined technology real including the author who founded a company developing speech recognition technology in the 1980s Speech recognition was an early part of Artificial Intelligence computers doing a task that had previously been exclusive to humans and proved to be more difficult than early pioneers expected *The Lost History of Talking to Computers* documents 27 years of those efforts the source of the history is the author's 309 monthly issues of a newsletter tracking the hundreds of companies trying to make a business out of this challenging technology Today we talk to computers frequently on our smartphones e.g. Apple's Siri or Google Assistant or to a home speaker e.g. Amazon's Alexa and often when we telephone a customer service number Most doctors use computer transcription of their notes for Electronic Healthcare Systems Speech recognition is teaching how to speak a new language and finding specific content in a video file How did we get here and where will it take us What can we learn from this history that has implications for the huge investments in more general AI today Readers will be amazed at how many companies were inspired by this challenge beginning more than three decades ago **Machine Learning, Optimization, and Data Science** Giuseppe Nicosia, Varun Ojha, Emanuele La Malfa, Giorgio Jansen, Vincenzo Sciacca, Panos Pardalos, Giovanni Giuffrida, Renato Umetsu, 2021-01-07 This two volume set LNCS 12565 and 12566 constitutes the refereed proceedings of the 6th International Conference on Machine Learning Optimization and Data Science LOD 2020 held in Siena Italy in July 2020 The total of 116 full papers presented in this two volume post conference

proceedings set was carefully reviewed and selected from 209 submissions These research articles were written by leading scientists in the fields of machine learning artificial intelligence reinforcement learning computational optimization and data science presenting a substantial array of ideas technologies algorithms methods and applications

Simple Heuristics that Make Us Smart Gerd Gigerenzer,Peter M. Todd,ABC Research Group,2000-10-12 Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason limitless knowledge and all of eternity in which to ponder choices To understand decisions in the real world we need a different more psychologically plausible notion of rationality and this book provides it It is about fast and frugal heuristics simple rules for making decisions when time is pressing and deep thought an unaffordable luxury These heuristics can enable both living organisms and artificial systems to make smart choices classifications and predictions by employing bounded rationality But when and how can such fast and frugal heuristics work Can judgments based simply on one good reason be as accurate as those based on many reasons Could less knowledge even lead to systematically better predictions than more knowledge Simple Heuristics explores these questions developing computational models of heuristics and testing them through experiments and analyses It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate dividing resources among offspring predicting high school drop out rates and playing the stock market As an interdisciplinary work that is both useful and engaging this book will appeal to a wide audience It is ideal for researchers in cognitive psychology evolutionary psychology and cognitive science as well as in economics and artificial intelligence It will also inspire anyone interested in simply making good decisions

From Big Data to Big Profits

Russell Walker, 2015-07-01. Technological advancements in computing have changed how data is leveraged by businesses to develop, grow, and innovate. In recent years, leading analytical companies have begun to realize the value in their vast holdings of customer data and have found ways to leverage this untapped potential. Now more firms are following suit and looking to monetize Big Data for big profits. Such changes will have implications for both businesses and consumers in the coming years. In *From Big Data to Big Profits*, Russell Walker investigates the use of Big Data to stimulate innovations in operational effectiveness and business growth. Walker examines the nature of Big Data and how businesses can use it to create new monetization opportunities. Using case studies of Apple, Netflix, Google, LinkedIn, Zillow, Amazon, and other leaders in the use of Big Data, Walker explores how digital platforms such as mobile apps and social networks are changing the nature of customer interactions and the way Big Data is created and used by companies. Such changes, as Walker points out, will require careful consideration of legal and unspoken business practices as they affect consumer privacy. Companies looking to develop a Big Data strategy will find great value in the SIGMA framework, which he has developed to assess companies for Big Data readiness and provide direction on the steps necessary to get the most from Big Data. Rigorous and meticulous, *From Big Data to Big Profits* is a valuable resource for students, researchers, and professionals with an interest in Big Data, digital platforms, and analytics.
