Fundamental Papers in Wavelet Theory Christopher Heil, David F. Walnut, 2009-01-10 This book traces the prehistory and initial development of wavelet theory a discipline that has had a profound impact on mathematics physics and engineering Interchanges between these fields during the last fifteen years have led to a number of advances in applications such as image compression turbulence machine vision radar and earthquake prediction This book contains the seminal papers that presented the ideas from which wavelet theory evolved as well as those major papers that developed the theory into its current form These papers originated in a variety of journals from different disciplines making it difficult for the researcher to obtain a complete view of wavelet theory and its origins Additionally some of the most significant papers have heretofore been available only in French or German Heil and Walnut bring together these documents in a book that allows researchers a complete view of wavelet theory s origins and development Multi-disciplinary Trends in Artificial

Spatial Aspects of Environmental Policy Wayne Gray, 2019-01-22 There has been a recent explosion of research incorporating a spatial dimension in environmental and natural resource economics where the spatial aspects of human behaviour or the natural environment make a crucial difference in the analysis and policy response to the problem Much of this research has been driven by the growing availability of spatially explicit social science data and the development of tools and methodological advances to use these data Collected in this volume are 24 key articles considering the reasons for spatial variation in policies due to either efficiency or equity considerations and the consequences of that spatial variation for both environmental and economic outcomes These articles demonstrate that the failure to address spatial issues in the analysis can create two problems 1 the analysis provides a poor basis for predicting actual behaviour that is specifically based upon spatial considerations and 2 the analysis fails to provide a basis for designing spatially targeted policies that could lead to more efficient outcomes **Computer Vision - ACCV 2016** Shang-Hong Lai, Vincent Lepetit, Ko

Fischler,Oscar Firschein,1987-06 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume **Computational Science - ICCS 2025** Michael H. Lees,Wentong Cai,Siew Ann Cheong,Yi Su,David Abramson,Jack J. Dongarra,Peter M. A. Sloot,2025-07-05 The 4 volume set LNCS constitutes the main proceedings of the 25th International Conference on Computational Science ICCS 2025 which took place in Singapore Singapore during July 7 9 2025 The 64 full papers and 52 short papers presented in these proceedings were carefully reviewed and selected from 162 submissions The ICCS 2025 main track full papers are organized in volumes 15903 15905 Parts I to III and the ICCS 2025 main track short papers are included in volume 15906 Part IV Low-Carbon Oriented Improvement Strategy for Flexibility and Resiliency of Multi-Energy Systems Yumin Zhang,Lu Zhang,Rufeng Zhang,Hao Wang,Shuai Yao,2024-09-18 Due to the inherent volatility and randomness the increasing share of energy from renewable resources presents a challenge to the operation of multi energy systems with heterogeneous energy carriers such as electricity heat hydrogen etc These factors

will make the systems hard to adjust their supply and demand flexibly to maintain energy balance to ensure reliability. Further, this hinders the development of a low carbon and economically viable energy system. By making full use of the synergistic interaction of generation, transmission, load, demand, and energy storage, a three-fold approach focused on quantifying demand flexibility, evaluating supply capabilities, and enhancing resilience can unlock the flexibility potential across various sectors of new energy systems. This approach provides an effective means of facilitating the transition from conventional energy systems to low carbon clean energy oriented paradigms. However, huge challenges arising from renewable energy pose great obstacles to the aforementioned solution pathway. The main objectives of this Research Topic are:

1. Develop advanced carbon emission accounting and measurement techniques for emerging multi energy systems.
2. Design effective methods for predicting renewable electricity generation.
3. Proposed efficient methods for quantitative assessment of uncertainty from renewables and loads.
4. Put forward advanced evaluation, optimization, and planning strategies incorporating diverse flexibility resources.
5. Design multifaceted market mechanisms and collaborative frameworks balancing economics and low carbon footprint.
6. Develop operational control and resilience enhancement techniques for distribution networks under large scale distributed energy integration.
