Young Children's Religious Education sets out to identify the conceptual pre requisites for young children's religious education learning and clearly highlights the challenges that children and their teachers encounter in the RE educational process. Based on a study with 431 children aged 5 to 7 years from different schools faith and non faith and 47 teachers from the same schools as the children this book offers an insightful look into younger children's religious education providing statistical evidence to dismantle the belief that young children lack the ability to conceptualise God in abstract terms. The information obtained from these children and their teachers reveals a major discrepancy between the teachers' perceptions of young children's conceptual abilities for RE learning on the one hand and children's actual abilities revealed in their responses throughout the study on the other. Based on the evidence described in the volume Petrovich argues that teacher training courses for primary RE need to be designed to include a substantial component of contemporary developmental research that is of direct relevance to children's conceptual abilities and understanding of abstract concepts. *Developmental Psychology and Young Children's Religious Education* is essential reading for students and researchers in developmental psychology, religious education, teacher education, education studies and cultural anthropology. *School & Society*, 1918

*Mind*, 1884      *Jung's Reception of Picasso and Abstract Art* Lucinda Hill, 2022-03-31 This book explores the nature of Jung's understanding of modern art in particular his reception to the work of Picasso and his striking prejudice shown in his controversial essay of 1932. Offering an important contribution towards understanding Jung's attitudes towards Picasso and modern art the book addresses the impact that Jung's unwillingness to engage in a deeper exploration of modern artforms had on the development of his psychological ideas. It explores and uncovers the reasons for Jung's derogatory view of Picasso and abstract art more generally revealing how Jung was unable to remain objective due to his own complex and equally fascinating relationship with art and the psychology of image making. The book argues that modern art parallels Jung's interests by embracing the spirit of experimentation and using new imagery to challenge creative conceptions which makes Jung's attitudes towards modern art all the more surprising. *Jung's Reception of Picasso and Abstract Art* will be of great interest to researchers, academics and those interested in analytical psychology, Jungian studies, art history and modernism, aesthetics and psychoanalysis.      *A History of Intelligence and 'Intellectual Disability'* C F Goodey, 2013-07-28 Starting with the hypothesis that not only human intelligence but also its antithesis intellectual disability are nothing more than historical contingencies C F Goodey's paradigm shifting study traces the rich interplay between labelled human types and the radically changing characteristics attributed to them. From the twelfth century beginnings of European social administration to the onset of formal human science disciplines in the modern era *A History of Intelligence and Intellectual Disability* reconstructs the socio-political and religious contexts of intellectual ability and disability and demonstrates how these concepts became part of psychology, medicine and biology. Goodey examines a wide array of classical, late medieval and Renaissance texts from popular guides on conduct and behavior to medical treatises and from religious and philosophical works to poetry and drama.

Focusing especially on the period between the Protestant Reformation and 1700 Goodey challenges the accepted wisdom that would have us believe that intelligence and disability describe natural trans historical realities Instead Goodey argues for a model that views intellectual disability and indeed the intellectually disabled person as recent cultural creations His book is destined to become a standard resource for scholars interested in the history of psychology and medicine the social origins of human self representation and current ethical debates about the genetics of intelligence **UGC NET**
