Phonological Skills and Learning to Read Usha Goswami,Peter Bryant,2016-03-23 This book sets out to integrate recent exciting research on the precursors of reading and early reading strategies adopted by children in the classroom It aims to develop a theory about why early phonological skills are crucial in learning to read and shows how phonological knowledge about rhymes and other units of sound helps children learn about letter sequences when beginning to be taught to read The authors begin by contrasting theories which suggest that children s phonological awareness is a result of the experience of learning to read and those that suggest that phonological awareness precedes and is a causal determinant of reading The authors argue for a version of the second kind of theory and show that children are aware of speech units called onset and rime before they learn to read and spell An important part of the argument is that children make analogies and inferences about these letter sequences in order to read and write new words

Number and Language Processing Xavier Seron,2020-08-26 There is psychological and neurobiological evidence that number and language processing present some specificities and may dissociate after brain damage Furthermore animals and babies seem to be able to discriminate small numerosities in a non symbolic way However one of the specificities of the human species is the development of language and symbolic processes The acquisition and development of arithmetic is thus bound to the acquisition of language and symbolic notations In this special issue the relationship between language and number processing is discussed through the examination of the similarities and divergences of language and number disorders in aphasic subjects in patients with dementia and in children with specific acquisition deficits A separate contribution is also devoted to the rehabilitation of number and calculation deficits in brain lesioned subjects
