Precision Assembly Technologies and Systems Svetan Ratchev, 2010-02-06 The development of new generation micro manufacturing technologies and systems has revolutionised the way products are designed and manufactured today with a significant impact in a number of key industrial sectors Micro manufacturing technologies are often described as disruptive enabling and interdisciplinary leading to the creation of whole new classes of products that were previously not feasible to manufacture While key processes for volume manufacture of micro parts such as machining and moulding are becoming mature technologies micro assembly remains a key challenge for the cost effective manufacture of complex micro products The ability to manufacture customizable micro products that can be delivered in variable volumes within relatively short timescales is very much dependent on the level of development of the micro assembly processes positioning alignment and measurement techniques gripping and feeding approaches and devices Micro assembly has developed rapidly over the last few years and all the predictions are that it will remain a critical technology for high value products in a number of key sectors such as healthcare communications defence and aerospace The key challenge is to match the significant technological developments with a new generation of micro products that will establish firmly micro assembly as a mature manufacturing process The book includes the set of papers presented at the 5 International Precision Assembly Seminar IPAS 2010 held in Chamonix France from the 14th to the 17th February 2010 Practical Electric Wiring for Lighting Installations, Suitable for Foremen, Wiremen & Students....
