Natural and Synthetic Waxes Ernst J. Krendlinger, Uwe H. Wolfmeier, 2022-10-31 Natural and Synthetic Waxes A compilation of all relevant information for the production and use of waxes in technical applications Waxes are among the oldest organic substances used by mankind Before all others beeswax is known to have played a role in human history for thousands of years But over time many other wax species have been detected and exploited and prepared for different utilizations Today we possess knowledge of a great variety of different types of waxes Unfortunately there still is no broadly accepted definition of a wax for the relatively few wax chemists waxes are usually defined by their physico chemical properties more than by their chemical constitution Waxes are not uniform but oligomeric and polymeric substances not simply describable with a chemical formula The realm of waxes encompasses fully or partly natural refined partly or fully synthetic products which can be extended by wax like products which do not fulfil all definition criteria Waxes are offered in different forms like pellets granules powders or micropowders Their number of technical applications runs into thousands However waxes in most cases are just adjuvants or additives and with few exceptions like candles not known to a broader public Only few publications over the last decades tried to present a more comprehensive overview of their chemistry chemical composition their physical and analytical properties their applications and their sometimes astonishing history Based on personal experience and expertise the authors intend to present an overview on the main classes of waxes their origin history future and potential fate Economical aspects like market size and development ecological impacts and challenges and regulatory issues are also addressed Waxes are indispensable products in everyday life and in industry and technology though mostly not even visible or distinguishable to experts They deserve more than the role of a poor cousin in chemistry and technology

Speaking in Tongues: A Critical Historical Examination Philip E. Blosser, Charles A. Sullivan, 2022-09-16 In three carefully researched volumes this ground breaking study examines the gift of tongues through 2 000 years of church history Starting in the present and working back in time these volumes consider 1 the modern redefinition of tongues as a private prayer language 2 the church's perennial understanding of tongues as ordinary human languages and 3 the Corinthian tongues which in light of Jewish liturgical tradition turn out to have been a foreign liturgical language Hebrew or Aramaic requiring bilingual interpreters In the first volume the authors establish that modern glossolalia far from being a supernatural gift enjoyed by certain believers since the time of Pentecost and undergoing a resurgence in modern times has no precedent in church life prior to the nineteenth century They discuss why German

theologians responding to the Irvingite revival coined the term glossolalia in the 1830s why Pentecostals between 1906 8 quietly began redefining tongues to mean a heavenly language unintelligible to human beings but pleasing to God instead of foreign languages useful for evangelism why Protestant cessationists believed miraculous tongues had ceased and why interpolated idioms like unknown tongues in Protestant Bibles were aimed originally at Rome s use of Latin **Religious Identity and Cultural Negotiation** Jenny McGill,2016-07-22 Given increasing global migration and the importance of positive cross cultural relations across national borders this book offers an interdisciplinary and intercultural exploration of identity formation It uniquely draws from theology psychology and sociology engaging narrative and identity theories migration and identity studies and the theologies of identity and migration and builds on them in an unprecedented study of international migrants to construct an initial theology of Christian identity in migration New sociological research describes the social construction of religious ethnic and national identities among non North American evangelical graduates who entered the United States to pursue advanced academic studies from 1983 to 2013 It provides an intercultural account of Christian identity formation in the context of migration transnationalism and globalization It ultimately argues that an integral component of Christian identity making involves the concept of migration of movement toward a transformation

Schmidt,2011-01-27 Information technology has been used in organisational settings and for organisational purposes such as accounting for a half century but IT is now increasingly being used for the purposes of mediating and regulating complex activities in which multiple professional users are involved such as in factories hospitals architectural offices and so on The economic importance of such coordination systems is enormous but their design often inadequate The problem is that our understanding of the coordinative practices for which these systems are developed is deficient leaving systems developers
