Plasma Instabilities of TeV Pair Beams Induced by Blazars Mahmoud S. A. Alawashra, 2025-09-26 This thesis develops a new theory combining the beam plasma instability and IGMF in one picture Recently it was observed that the expected cascade emission of gamma rays in the TeV range from some distant blazars is not seen in their spectra The underlying physical processes are well known and a failure of the model predictions would shake the foundations of modern physics unless a credible explanation for this failure is found One could argue that a femto Gauss strong magnetic field in the cosmic voids would disperse the cascade emission although the question remains as to how this magnetic field was generated

Mahmoud Alawashra provides us with a carefully crafted assessment of a second possibility namely energy loss due to plasma instabilities in the cosmic voids His first point is what if there is a weak magnetic field It might not dilute the cascade emission but suppress the beam plasma instabilities ruling out an intermediate range of magnetic field amplitudes where neither scenario works Mahmoud s study is the first in the literature to combine instability and IGMF in one picture Authors then investigated the nonlinear feedback of the instability and finds it in a quasi steady state where the energy loss of the cascades is weak The whole study is simply outstanding and combines analytical skills with numerical ability

Telephone System's Preeminent Role in the Growth of Industrial Design Ralph O. Meyer, Russell A. Flinchum, 2025-05-15
Histories of design pay scant attention to the corded telephone which played an immeasurable role in early communication. Although the Bell System with many Nobel Prizes is justly acknowledged for its technical prowess it should also be recognized for its early and considerable impact on the developing discipline of industrial design. In 1930 young Henry Dreyfuss who would later become known as a pioneer of industrial design was retained by the Bell System as a design consultant and matured in that environment. With substantial input from Bell System engineers Dreyfuss and his staff produced attractive telephone designs that were manufactured and installed in more than one hundred million American homes and copied around the world. Featuring over one hundred illustrations *Bell Telephone System's Preeminent Role in the Growth of Industrial Design* is a deep dive into the development and evolution of the corded telephone. A detailed case study of an object that would become so ubiquitous and commonplace it is also the story writ large of the establishment and importance of the field of industrial design.

Globalization Development and Social Justice Ann El Khoury, 2015-03-27
Are there existing alternatives to corporate globalization? What are the prospects for and commonalities between communities and movements such as Occupy the World Social Forum and alternative economies? *Globalization Development and Social Justice* advances the proposition that another globalization is not only possible but already exists. It demonstrates that there are multiple pathways towards development with social justice and argues that enabling propositional agency rather than oppositional agency such as resistance is a more effective alternative to neoliberal globalization. El Khoury develops a theory of infraglobalization that emphasizes creative constitution not just contestation of global and local processes. The book features case studies and examples of diverse economic practice and innovative emergent political forms from the Global South and North. These case studies are located in the informal social economy and community development as well as everyday practices from prefigurative politics to community cooperatives and participatory planning. This book makes an important contribution to debates about the prospects for and practices of a transformative grassroots globalization and to critical debates about globalization and development strategies. It will be of interest to students and scholars of international relations globalization social movement studies political and economic geography sociology anthropology and development studies.

Conspiracy Theories in the Time of Covid-19 Clare Birchall, Peter Knight, 2022-11-04
Conspiracy Theories in the Time of Covid 19 provides a wide ranging analysis of the emergence and development of conspiracy theories during the Covid 19 pandemic with a focus on the US and the UK. The book combines digital methods analysis of large datasets assembled from social media with politically and culturally contextualised close readings informed by cultural studies. In contrast to other studies which often have an alarmist take on the infodemic it places Covid 19 conspiracy theories in a longer historical perspective. It also argues against the tendency to view conspiracy theories as merely evidence of a fringe or pathological way of thinking. Instead the starting assumption is that conspiracy theories including Covid 19 conspiracy

theories often reflect genuine and legitimate concerns even if their factual claims are wide of the mark The authors examine the nature and origins of the conspiracy theories that have emerged the identity and rationale of those drawn to Covid 19 conspiracism how these conspiracy theories fit within the wider political economic and technological landscape of the online information environment and proposed interventions from social media platforms and regulatory agencies This book will appeal to anyone interested in conspiracy theories misinformation culture wars social media and contemporary society The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution CC BY 4.0 license
