Laurence Foss,2012-02-01 The End of Modern Medicine chronicles the work of a small influential band of medical theorists and clinicians who over the past decade have sought to redress the physical fundamentalism of the biomedical model that shaped their professional training Laurence Foss challenges the prevailing medical model whereby mind and body are essentially separated and charts a new psychobiological course Asking fresh questions raising new possibilities probing long established preconceptions Foss presents a radically reconfigured medical model This model accounts for the full range of findings in the experimental literature most notably those surfacing over the past quarter century in psychophysiological studies which show a correlation between psychosocial variables and disease susceptibility that are in line with what more basic sciences tell us about the behavior of material systems and the nature of scientific explanation Foss also critically analyzes the regulative ideals of today s medical research community and puts modern science itself from which these ideals derive under a microscope **Mind as Machine**

Margaret A. Boden,2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible Boden traces the key questions back to Descartes s revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she

sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years

In Defense of an Evolutionary Concept of Health Dr Mahesh Ananth, 2012-10-01 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety
