The New ABCs of Research Ben Shneiderman,2016-02-04 The problems we face in the 21st century require innovative thinking from all of us Be it students academics business researchers of government policy makers Hopes for improving our healthcare food supply community safety and environmental sustainability depend on the pervasive application of research solutions The research heroes who take on the immense problems of our time face bigger than ever challenges but if they adopt potent guiding principles and effective research lifecycle strategies they can produce the advances that will enhance the lives of many people These inspirational research leaders will break free from traditional thinking disciplinary boundaries and narrow aspirations They will be bold innovators and engaged collaborators who are ready to lead yet open to new ideas self confident yet empathetic to others In this book Ben Shneiderman recognizes the unbounded nature of human creativity the multiplicative power of teamwork and the catalytic effects of innovation He reports on the growing number of initiatives to promote more integrated approaches to research so as to promote the expansion of these efforts It is meant as a guide to students and junior researchers as well as a manifesto for senior researchers and policy makers challenging widely held beliefs about how applied innovations evolve and how basic breakthroughs are made and helping to plot the course towards tomorrow s great advancements

Commercial Aircraft Propulsion and Energy Systems Research National Academies of Sciences, Engineering, and Medicine,Division

on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Propulsion and Energy Systems to Reduce Commercial Aviation Carbon Emissions, 2016-08-09 The primary human activities that release carbon dioxide CO₂ into the atmosphere are the combustion of fossil fuels coal natural gas and oil to generate electricity the provision of energy for transportation and as a consequence of some industrial processes Although aviation CO₂ emissions only make up approximately 2.0 to 2.5 percent of total global annual CO₂ emissions research to reduce CO₂ emissions is urgent because 1 such reductions may be legislated even as commercial air travel grows 2 because it takes new technology a long time to propagate into and through the aviation fleet and 3 because of the ongoing impact of global CO₂ emissions Commercial Aircraft Propulsion and Energy Systems Research develops a national research agenda for reducing CO₂ emissions from commercial aviation This report focuses on propulsion and energy technologies for reducing carbon emissions from large commercial aircraft single aisle and twin aisle aircraft that carry 100 or more passengers because such aircraft account for more than 90 percent of global emissions from commercial aircraft Moreover while smaller aircraft also emit CO₂ they make only a minor contribution to global emissions and many technologies that reduce CO₂ emissions for large aircraft also apply to smaller aircraft As commercial aviation continues to grow in terms of revenue passenger miles and cargo ton miles CO₂ emissions are expected to increase To reduce the contribution of aviation to climate change it is essential to improve the effectiveness of ongoing efforts to reduce emissions and initiate research into new approaches

Rots, 2022-05-22 Computational Modelling of Concrete and Concrete Structures contains the contributions to the EURO C 2022 conference Vienna Austria 23-26 May 2022. The papers review and discuss research advancements and assess the applicability and robustness of methods and models for the analysis and design of concrete fibre reinforced and prestressed concrete structures as well as masonry structures. Recent developments include methods of machine learning, novel discretisation methods, probabilistic models and consideration of a growing number of micro structural aspects in multi scale and multi physics settings. In addition, trends towards the material scale with new fibres and 3D printable concretes and life cycle oriented models for ageing and durability of existing and new concrete infrastructure are clearly visible. Overall, computational robustness of numerical predictions and mathematical rigour have further increased, accompanied by careful model validation based on respective experimental programmes. The book will serve as an important reference for both academics and professionals, stimulating new research directions in the field of computational modelling of concrete and its application to the analysis of concrete structures. EURO C 2022 is the eighth edition of the EURO C conference series after Innsbruck 1994, Bad Gastein 1998, St. Johann im Pongau 2003, Mayrhofen 2006, Schladming 2010, St. Anton am Arlberg 2014 and Bad Hofgastein 2018. The overarching focus of the conferences is on computational methods and numerical models for the analysis of concrete and concrete structures.
