Physical Science Ordinary Level 2014 Cambridge:

Developing Future-ready Learners for a Global Age Suzanne S. Choo, Woon Chia Liu, Bee Leng Chua, 2024-12-02
Suzanne S Choo Woon Chia Liu and Bee Leng Chua offer a dynamic look into the tripartite relationship between education research policy and practice that characterizes Singapore's changing education landscape. Over the years, Singapore has garnered increasing attention internationally for its world-class education system. Pushing back against the stereotypical notions of exam and teacher-centric education in Asia, the contributors to this volume discuss opportunities as well as challenges in Singapore's innovation towards constructivist, critical, culturally responsive and cosmopolitan forms of learning. Highlighting the pedagogical innovation and its context in Singapore's teacher education and schools, the authors bridge theory and practice by providing an understanding of innovative practices informed by key shifts in Singapore's education policies and the key conceptual principles informing these practices. More importantly, it provides on-the-ground empirical insights into the ways these innovative pedagogical practices are enacted in the classroom and in teacher education programmes. Each chapter provides an in-depth understanding of how these pedagogies are applied across various subject disciplines including guided problem solving in Mathematics, games-based pedagogy in Science, multimodal literacies in language, ethical criticism in Literature, Nonlinear Pedagogy in Physical Education, multicultural approaches in music and dialogic pedagogy in drama among others. Balancing theoretical and empirical focus, this resourceful text will be of interest to students, researchers and practitioners in educational development, pedagogy and teacher education as well as policymakers across international fields in education.

The Physical Signature of Computation Neal G. Anderson, Gualtiero Piccinini, 2024
Anderson and Piccinini offer the most systematic, rigorous and comprehensive account of computational implementation to date. Their robust mapping account holds that the key for establishing that a computation is physically implemented is that the physical states bear neither more nor less information than the computational states they map onto.

Physics of Radiation and Climate Michael A. Box, Gail P. Box, 2015-10-14
Our current climate is strongly influenced by atmospheric composition and changes in this composition are leading to climate change. *Physics of Radiation and Climate* takes a look at how the outward flow of longwave or terrestrial radiation is affected by the complexities of the atmosphere's molecular spectroscopy. This book examines the planet in

Biodiversity and Climate Change Thomas E. Lovejoy, Lee Hannah, 2019-01-08
An essential up-to-date look at the critical interactions between biological diversity and climate change that will serve as an immediate call to action. The physical and biological impacts of climate change are dramatic and broad-ranging. People who care about the planet and manage natural resources urgently need a synthesis of our rapidly growing understanding of these issues. In this all-new sequel to the 2005 volume *Climate Change and Biodiversity*, leading experts in the field summarize observed changes, assess what the future holds and offer suggested responses. Edited by distinguished conservationist Thomas E. Lovejoy and climate change biologist Lee Hannah, this comprehensive volume includes the latest

research and explores emerging topics From extinction risk to ocean acidification the future of the Amazon to changes in ecosystem services and geoengineering to the power of ecosystem restoration this volume captures the sweep of climate change transformation of the biosphere An authoritative up to date reference this is the new benchmark synthesis for climate change scientists conservationists managers policymakers and educators

The Triple Challenge for Europe Jan Fagerberg, Staffan Laestadius, Ben R. Martin, 2015 Europe is confronted by an intimidating triple challenge economic stagnation climate change and a governance crisis This book demonstrates how these challenges are inter related and discusses how they can be dealt with more effectively in order to arrive at a more economically secure environmentally sustainable and well governed Europe

Integrative Study of

the Mean Sea Level and Its Components Anny Cazenave,Nicolas Champollion,Frank Paul,Jérôme Benveniste,2017-04-28

This volume presents the most recent results of global mean sea level variations over the satellite altimetry era starting in the early 1990s and associated contributions such as glaciers and ice sheets mass loss ocean thermal expansion and land water storage changes Sea level is one of the best indicators of global climate changes as it integrates the response of several components of the climate system to external forcing factors including anthropogenic forcing and internal climate variability Providing long accurate records of the sea level at global and regional scales and of the various components causing sea level changes is of crucial importance to improve our understanding of climate processes at work and to validate the climate models used for future projections The Climate Change Initiative project of the European Space Agency has provided a first attempt to produce consistent and continuous space based records for several climate parameters observable from space among them sea level This book presents current knowledge of the sea level budget over the altimetry era and 20th century Previously published in Surveys in Geophysics Volume 38 Issue 1 2017

Sea Level Change and Maritime Boundaries Antoine Grima,2023-06-23 Climate change is modifying in varying measure the coastal geography of States The phenomenon is not temporary but is expected to carry on during the 21st century and beyond A distinctive feature of modern international law is the concept of maritime zones Each maritime area is subject to an intricate scheme of States rights and obligations Coastal geography is a fundamental component of a long standing method developed and agreed upon between States to establish the outward limits of these areas A feature of this method is the baseline In international law it is the only reference line from where the outward limits of maritime zones are measured There are clear rules on how this is established along a coast There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward thus affecting the outward limits of their maritime zones It is clear that the stability of maritime boundaries is put into question and this may bring about serious political legal and economic repercussions This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal the purpose of which is to resolve overlapping maritime claims Key questions emerge What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones What are the consequences of changes to coastal geography To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern Is international law able to address this If so in what way and what are its limits What can be done to resolve this

Our Warming Planet: Climate Change Impacts And Adaptation Martin Parry,Cynthia Rosenzweig,Manishka De Mel,2021-10-22 This volume the second in the Lectures in Climate Change series covers the full array of climate impacts and adaptation measures It has been brought together by friends and colleagues of Dr Martin Parry Co Chair of the Intergovernmental Panel on Climate Change IPCC 2007 assessment on impacts and adaptation The writers are experts in this field and have been lead authors in many of the IPCC assessments and other major publications Lectures

in Climate Change is a unique combination of written text plus electronic slides that together comprise an informative and up to date set of presentations This second volume entitled Our Warming Planet Climate Change Impacts and Adaptation covers areas of climate impacts related to climate science methods and approaches sectors regional and national studies and policy and practice The volume comprises topics such as current and future challenges of climate change global assessments downscaling community based adaptation impacts on biodiversity food systems water resources and cities Research from across the world is presented on making science actionable through assessments early warning and early action communicating climate risk documenting the uptake of adaptation on the global front and transformation towards systemic resilience Included with this publication are downloadable electronic slides and accompanying notes of each lecture for students teachers and public speakers around the world to be better able to understand and present climate change impacts and adaptation Related Link s [Green Finance in the European Union](#) Marta Postuła,Mariusz Lipski,2024-09-02 While global challenges continue to reshape the here and now public and corporate finance management needs to adapt quickly to increase the efficiency of institutions enterprises and policies to face our new reality There are very few publications that offer a comprehensive approach to the financing of environmental protection activities by the European Union This book explores this topic from various angles and levels as well as highlighting the determinants that influence micro and macro level decisions in this area It presents an in depth and unique analysis of the sources of funding for environmental measures implemented by European Union institutions against the backdrop of national expenditure by Member States and analyses the plausibility of the adopted targets in the run up to 2050 in the context of the war in Ukraine and ad hoc energy policy solutions This book is a voice in an ongoing discussion among the community of practitioners and theoreticians on sources of financing for the energy transition to achieve independence from Russian sources in the quickest possible timeframe It demonstrates that environmental measures cannot occur without the financial participation of economic actors and financial institutions particularly the capital market and further underscores the scale of involvement in environmental projects as measured by the value of green loans and green bonds covered by European financial institutions The authors offer policy recommendations for financing activities related to environmental policy notably energy transition This book will appeal to scholars students and researchers of corporate finance banking strategic and public finance management as well as policymakers and practitioners involved in green finance investments

Social Capital, Resilience and Adaptation on Small Islands Jan Petzold,2017-03-24 The book deals with the role of social capital regarding its potential to increase small islands adaptive capacity to climate change The case study of the Isles of Scilly UK shows how social structures can play a very important role for climate change adaptation It is argued that social features have to be understood in a non deterministic and potentially ambivalent manner according to their place specific geographical cultural and historical context Only then risk management and adaptation strategies can succeed and function in a sustainable way The findings have relevance for

the further refinement of social capital theory and social emergence Combined with the perspective of resilience this approach is also relevant from a policy standpoint given that small islands have been identified as hotspots not only due to their vulnerability but also because they serve as examples for media and politics to advance the agenda of environmental protection

Climate Change and Estuaries Michael J. Kennish, Hans W. Paerl, Joseph R. Crosswell, 2023-09-15 Climate change is having an increasing impact on coastal estuarine and marine environments worldwide This book provides state of the art coverage of climate change effects on estuarine ecosystems from local regional and global perspectives With editors among the most noted international scholars in coastal ecology and estuarine science and contributors who are world class in their fields the chapters in this volume consist of comprehensive studies in coastal estuarine and marine sciences climate change and coastal management and provide an extensive international collection of data in tabular illustrated and narrative formats useful for coastal scientists planners and managers Comprised of three sections 1 physical chemical aspects 2 biological aspects and 3 management aspects the book not only examines climatic and non climatic drivers of change affecting coastal estuarine and marine environments but also their interactions and effects on populations of organisms communities habitats and ecosystem structure and function Pulling together today s most salient issues and key literature advances for those concerned with coastal management it allows the reader to see across direct and indirect interactions among disciplinary and ecosystem boundaries Climate Change and Estuaries meets the research needs of climate scientists estuarine and marine biologists marine chemists marine geologists hydrologists and coastal engineers while students professors administrators and other professionals will also find it an exhaustive reference

Coastal Biogeomorphology Zhan Hu, Zeng Zhou, Simon Marius Mudd, Iris Möller, Zheng Gong, 2022-09-13

The Indian Ocean and its Role in the Global Climate System Caroline C. Ummenhofer, Raleigh R. Hood, 2024-04-18 The Indian Ocean and its Role in the Global Climate System provides an overview of our contemporary understanding of the Indian Ocean geology atmosphere ocean hydrology biogeochemistry and its role in the climate system It describes the monsoon systems Indian Ocean circulation and connections with other ocean basins Climatic phenomena in the Indian Ocean are detailed across a range of timescales seasonal interannual to multi decadal Biogeochemical and ecosystem variability is also described The book will provide a summary of different tools e g observations modeling paleoclimate records that are used for understanding Indian Ocean variability and trends Recent trends and future projections of the Indian Ocean including warming extreme events ocean acidification and deoxygenation will be detailed The Indian Ocean is unique and different from other tropical ocean basins due to its geography It is traditionally under observed and understudied yet plays a fundamental role for regional and global climate The vagaries of the Asian monsoon affect over a billion people and a third of the global population live in the vicinity of the Indian Ocean It is also particularly vulnerable to climate change with robust warming and trends in heat and freshwater observed in recent decades Advances have recently been made in our understanding of the Indian Ocean s

circulation interactions with adjacent ocean basins and its role in regional and global climate Nonetheless significant gaps remain in understanding observing modeling and predicting Indian Ocean variability and change across a range of timescales As such this book is the perfect compendium to any researcher student teacher lecturer in the fields of oceanography atmospheric science paleoclimate environmental science meteorology and geology as well as policy managers and water resource managers Provides interdisciplinary content with a comprehensive overview for students and practitioners from a wide range of disciplines as well as for stakeholders Presents a broad overview and background on the current state of knowledge of the variability change and regional impacts of the Indian Ocean Includes links to animations slideshows and other educational resources

Modeling and Simulation of Carbon Emission Related Issues Wen-Hsien

Tsai,2019-08-19 Carbon emissions reached an all time high in 2018 when global carbon dioxide emissions from burning fossil fuels increased by about 2.7% after a 1.6% increase in 2017 Thus we need to pay special attention to carbon emissions and work out possible solutions if we still want to meet the targets of the Paris climate agreement This Special Issue collects 16 carbon emissions related papers including 5 that are carbon tax related and 4 energy related papers using various methods or models such as the input output model decoupling analysis life cycle impact analysis LCIA relational analysis model generalized Divisia index model GDIM forecasting model three indicator allocation model mathematical programming real options model multiple linear regression etc The research studies come from China Taiwan Brazil Thailand and United States These researches involved various industries such as agricultural industry transportation industry power industry tire industry textile industry wave energy industry natural gas industry and petroleum industry Although this Special Issue does not fully solve our concerns it still provides abundant material for implementing energy conservation and carbon emissions reduction However there are still many issues regarding the problems caused by global warming that require research

Environmental Change, Livelihood Issues and Migration Avijit Mistri,Bhaswati Das,2019-09-05 This book deals with the out migration from the UNESCO designated Sundarban Biosphere Reserve in India It focuses on the question whether out migration is a consequence of environmental change or livelihood issues and development deficit It investigates the processes of migration from a broad spectrum exploring a wide range of economic social and demographic factors along with environmental stressors The processes of migration studied and empirically illustrated include migration stream migration pattern reasons for migration the nexus between migration and social network aspiration and different human economic and physical capital The book adopts a modelistic approach called the Sustainable Livelihood Approach SLA to investigate whether migration from Sundarban is an environmental migration or not In addition it uses the risk perception approach of people's cognition or affective imagery to examine the degree of perceived environmental risk in the means of living especially farming and fishing of the islanders of Sundarban The book will be of interest to researchers and academicians in the areas of migration studies geography political science sociology and economics

Climate, Planetary and Evolutionary

Sciences Guido Visconti, 2021-04-14 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content Questions and related keywords were prepared for the machine to query discover collate and structure by Artificial Intelligence AI clustering The AI based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary for example climate planetary and evolution sciences Springer Nature has published much on these topics in its journals over the years so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful The automatically generated literature summaries in this book are intended as a springboard to further discoverability They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples It is important to us as a publisher to make the advances in technology easily accessible to our authors and find new ways of AI based author services that allow human machine interaction to generate readable usable collated research content

Metabolic Adaptations in Plants During Abiotic Stress Akula Ramakrishna, Sarvajeet Singh Gill, 2018-12-07 Key features Serves as a cutting edge resource for researchers and students who are studying plant abiotic stress tolerance and crop improvement through metabolic adaptations Presents the latest trends and developments in the field of metabolic engineering and abiotic stress tolerance Addresses the adaptation of plants to climatic changes Gives special attention to emerging topics such as the role of secondary metabolites small RNA mediated regulation and signaling molecule responses to stresses Provides extensive references that serve as entry points for further research Metabolic Adaptations in Plants during Abiotic Stress covers a topic of past present and future interest for both scientists and policy makers as the global challenge of climate change is addressed Understanding the mechanisms of plant adaptation to environmental stresses can provide the necessary tools needed to take action to protect them and hence ourselves This book brings together recent findings about metabolic adaptations during abiotic stress and in diverse areas of plant adaptation It covers not only the published results but also introduces new concepts and findings to offer original views on the perspectives and challenges in this field
