Plane Answers to Complex Questions Ronald Christensen, 2013-03-09 The second edition of Plane Answers has many additions and a couple of deletions New material includes additional illustrative examples in Appendices A and B and Chapters 2 and 3 as well as discussions of Bayesian estimation near replicate lack of fit tests testing the independence assumption testing variance components the interblock analysis for balanced in complete block designs nonestimable constraints analysis of unreplicated experiments using normal plots tensors and properties of Kronecker products and Vee operators The book contains an improved discussion of the relation between ANOVA and regression and an improved presentation of general Gauss Markov models The primary material that has been deleted are the discussions of weighted means and of log linear models The material on log linear models was included in Christensen 1990b so it became redundant here Generally I have tried to clean up the presentation of ideas wherever it seemed obscure to me Much of the work on the second edition was done while on sabbatical at the University of Canterbury in Christchurch New Zealand I would particularly like to thank John Deely for arranging my

sabbatical Through their comments and criticisms four people were particularly helpful in constructing this new edition I would like to thank Wes Johnson Snehilata Huzurbazar Ron Butler and Vance Berger
