### ECOLOGY

**Introduction:** The ability to interpret graphs and tables is a necessary skill in science but also finds use in everyday life. In articles or textbooks you are likely to find graphs and tables. Understanding the article's message depends heavily on being able to interpret many different types of graphs and tables. In science tables are used to provide information. Frequently one quantity in a table depends upon or is related to another. Data from tables can be graphed to aid interpretation. Graphs give a visual representation of the data that helps to reveal regularities and patterns.

**Procedure:** Answer the following questions regarding the graphs below.

**I. Bacteria reproduce by splitting in half. It takes about 20 minutes, under ideal conditions, for a bacteria population to double.**

#### Analysis Questions

1. Describe what is happening to the population of bacteria.
2. Is the rate of population growth constant or variable?
3. What do we call this type of growth?

**II. White pine became extinct in northern Minnesota during the last period of glaciation, although it remained in southern climates such as Virginia. Once the glaciers began to retreat, the white pine began to expand northward again; it reappeared in northern Minnesota about 9400 years ago, this is time 0 in the graph**
