Observing Human Traits Lab

Background: Physical traits are observable characteristics that are determined by genes. Genes are specific segments of DNA located on chromosomes that code for a particular trait. Most genes have two or more variations called alleles. Some alleles are dominant over others and dominant alleles will be expressed (an organism's phenotype or physical appearance) over recessive alleles. Recessive alleles may be present in an organism but expression is masked in the presence of a dominant allele for the same gene. Recessive traits are only expressed when there are two recessive alleles present in the genotype (DNA code).

Keep in mind that it's not always quite this simple. There are other factors that influence expression, and most traits have several genes that influence them. This is an introduction to dominant and recessive traits. Let's get started!

Directions: Circle the phenotype you have for each of the following traits.

Number without language: comparative psychology and

the evolution of numerical cognition Christian Agrillo, Michael Beran, 2013-07-09 Despite once being reserved as perhaps a unique human ability and one reliant on language comparative and developmental research has shown that numerical abilities predate verbal language Human infants and several non human species have been shown to represent numerical information in varied contexts and the capacity to discriminate both small and large numerosities has been reported in mammals birds amphibians and fish The similar performances often observed across such diverse species have led to the hypothesis that there may be shared core systems underlying number abilities of non human species and human non verbal numerical abilities Thus animal models could provide useful insight on our comprehension of numerical cognition and in particular the evolution of non verbal numerical abilities Several aspects need be clarified For instance the ontogeny of numerical competence in animals has been rarely investigated It is unclear whether all species can represent numerical information or on the contrary use non numerical continuous quantities that co vary with number such as cumulative surface area density and space In addition the existence of a specific mechanism to process small numbers

Flourishing Thought Ruth A. Miller, 2020-03-06 Challenging the posthumanist canon that celebrates the preeminence of matter Ruth Miller in *Flourishing Thought* contends that what nonhuman systems contribute to democracy is thought Drawing on recent feminist theories of nonhuman life and politics Miller shows that reproduction and flourishing are not antithetical to contemplation and sensitivity After demonstrating that processes of life and processes of thought are indistinguishable Miller finds that four menacing accumulations of matter and information global surveillance stored embryos human clones and reproductive trash are politically productive rather than threats to democratic politics As a consequence she questions the usefulness of individual rights such as privacy and dignity contests the value of the rational metaphysics underlying human centered political participation and reevaluates the gender relations that derive from this type of participation Ultimately in place of these human centered structures Miller posits a more meditative mode of democratic engagement Miller's argument has shattering implications for the debates over the proper use and disposal of embryonic tissue alarms about data gathering by the state and corporations and other major ethical social and security issues

Darwin and the Bible Richard H. Robbins, 2015-10-05 For courses in evolution creationism or as a supplemental item in biology and or biological anthropology courses *Darwin and the Bible* helps readers to understand the nature history and passions behind the debate over scientific and religious versions of creation and human origins *Darwin and the Bible* The Cultural Confrontation is about the history and nature of the disputes over human origins that arose with the publication of Charles Darwin's book *Origin of Species* in 1859 The readings in the text provide the historical theological social and political backgrounds of the debate Rather than trying to demonstrate the truth of Darwinian evolution this book seeks to help the reader understand why the debate over Darwin and the Bible remains as contentious as ever The book

seeks to examine why Darwin's theory of evolution appears threatening to some people and likewise to help understand why some scientists often react with such emotion to challenges to their views. The contributors include biological scientists, social scientists, social historians, and proponents of the importance of God, faith, and religion in people's lives. **Scientific and Technical Aerospace Reports**, 1979. Lists citations with abstracts for aerospace-related reports obtained from world-wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database. **Research in Education**, 1969. **The Genome War** James Shreeve, 2007-12-18. The long-awaited story of the science, the business, the politics, the intrigue behind the scenes of the most ferocious competition in the history of modern science: the race to map the human genome. On May 10, 1998, biologist Craig Venter, director of the Institute for Genomic Research, announced that he was forming a private company that within three years would unravel the complete genetic code of human life seven years before the projected finish of the U.S. government's Human Genome Project. Venter hoped that by decoding the genome ahead of schedule, he would speed up the pace of biomedical research and save the lives of thousands of people. He also hoped to become very famous and very rich. Calling his company Celera (from the Latin for speed), he assembled a small group of scientists in an empty building in Rockville, Maryland, and set to work. At the same time, the leaders of the government program, under the direction of Francis Collins, head of the National Human Genome Research Institute at the National Institutes of Health, began to mobilize an unexpectedly unified effort to beat Venter to the prize. Knowledge that had the potential to revolutionize medicine and society. The stage was set for one of the most thrilling and important dramas in the history of science. *The Genome War* is the definitive account of that drama, the race for the greatest prize biology has had to offer, told by a writer with exclusive access to Venter's operation from start to finish. It is also the story of how one man's ambition created a scientific Camelot where, for a moment, it seemed that the competing interests of pure science and commercial profit might be gloriously reconciled and the national repercussions that resulted when that dream went awry. *Resources in Education*, 1990-10. *Selected Water Resources Abstracts*, 1990. **A Human Algorithm** Flynn Coleman, 2019-10-01. A groundbreaking narrative on the urgency of ethically designed AI and a guidebook to reimagining life in the era of intelligent technology. *The Age of Intelligent Machines* is upon us, and we are at a reflection point. The proliferation of fast-moving technologies, including forms of artificial intelligence akin to a new species, will cause us to confront profound questions about ourselves. The era of human intellectual superiority is ending, and we need to plan for this monumental shift. *A Human Algorithm: How Artificial Intelligence Is Redefining Who We Are* examines the immense impact intelligent technology will have on humanity. These machines, while challenging our personal beliefs and our socioeconomic world order, also have the potential to transform our health and well-being, alleviate poverty and suffering, and reveal the mysteries of intelligence and consciousness. International human rights attorney Flynn Coleman deftly argues that it is critical that we instill values, ethics, and morals into our robots, algorithms, and other forms of AI. Equally important, we

need to develop and implement laws policies and oversight mechanisms to protect us from tech s insidious threats To realize AI s transcendent potential Coleman advocates for inviting a diverse group of voices to participate in designing our intelligent machines and using our moral imagination to ensure that human rights empathy and equity are core principles of emerging technologies Ultimately A Human Algorithm is a clarion call for building a more humane future and moving conscientiously into a new frontier of our own design Coleman argues that the algorithms of machine learning if they are instilled with human ethics and values could bring about a new era of enlightenment San Francisco Chronicle *Concepts, Theories, and Rationality in the Biological Sciences* Gereon Wolters, 2022-05-31 A Unified Report on the State of the Art in the Philosophy of Biology In October 1993 the University of Pittsburgh hosted the Second Pittsburgh Konstanz Colloquium in the Philosophy of Science with a focus on the rapidly growing field of philosophy of biology An interdisciplinary group of philosophers and scientists came together to discuss the basic theories and concepts of biology and their connections with ethics economics and psychology The colloquium organizers strove to create an event that would provide attendees with a wide overview on the current state of the philosophy of biology with as many topics and views on these topics as possible Those presentations are gathered here in a volume that offers the reader a varied and thorough survey of the field
