Bettencourt, 2021-08-17 A novel integrative approach to cities as complex adaptive systems applicable to issues ranging from innovation to economic prosperity to settlement patterns Human beings around the world increasingly live in urban environments In Introduction to Urban Science Luis Bettencourt takes a novel integrative approach to understanding cities as complex adaptive systems claiming that they require us to frame the field of urban science in a way that goes beyond existing theory in such traditional disciplines as sociology geography and economics He explores the processes facilitated by and in many cases unleashed for the first time by urban life through the lenses of social heterogeneity complex networks scaling circular causality and information Though the idea that cities are complex adaptive systems has become mainstream until now those who study cities have lacked a comprehensive theoretical framework for understanding cities

and urbanization for generating useful and falsifiable predictions and for constructing a solid body of empirical evidence so that the discipline of urban science can continue to develop Bettencourt applies his framework to such issues as innovation and development across scales human reasoning and strategic decision making patterns of settlement and mobility and their influence on socioeconomic life and resource use inequality and inequity biodiversity and the challenges of sustainable development in both high and low income nations It is crucial says Bettencourt to realize that cities are not zero sum games and that knowledge human cooperation and collective action can build a better future

**After the War** Ruth H. Howes, Caroline L.

Herzenberg, 2015-12-01 This book examines the lives and contributions of American women physicists who were active in the years following World War II during the middle decades of the 20th century. It covers the strategies they used to survive and thrive in a time where their gender was against them. The percentage of PhDs in physics has risen from 6% in 1983 to 20% in 2012, an all-time high for women. By understanding the history of women in physics, these gains can continue. It discusses the major classes of women physicists: those who worked on military projects and those who worked in industrial laboratories and at universities, largely in the late 1940s and 1950s. While it includes minimal discussion of physics and physicists in the 1960s and later, this book focuses on the challenges and successes of women physicists in the years immediately following World War II and before the eras of affirmative actions and the use of the personal computer. *Future Spacecraft Propulsion Systems and Integration* Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi-disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems. It discusses how to match near-term and far-term aerospace vehicles to missions and provides a comprehensive overview of the subject, directly contributing to the next generation space infrastructure from space tourism to space exploration. This holistic treatment defines a mission portfolio addressing near-term to long-term space transportation needs, covering sub-orbital, orbital, and escape flight profiles. In this context, a vehicle configuration classification is introduced, covering alternatives starting from the dawn of space access. A best-practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission. This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike. **The New ABCs of Research** Ben Shneiderman, 2016 This book is a guide for junior researchers and a manifesto for senior researchers and policy makers about how to update policies to respond to the immense challenges of our times. The guiding principles are to combine applied and basic research in ways that use the methods of science, engineering, and design. *The Search for Knowledge and Understanding* Professor Maxwell R. Bennett AO, 2019-05-28 For nearly a millennium, universities have searched for knowledge, understanding, and truth. Internationally renowned neuroscientist Professor Maxwell Bennett evaluates the work of 20 of the greatest scholars in the University of Sydney's history and shows how this university's search has benefitted society in manifold ways. *The Search for Knowledge and Understanding* demonstrates an interdisciplinary approach as Bennett crafts short but insightful biographies of some of the most significant scholars that have worked at Australia's oldest university over the past half-century in medicine, the life sciences, the physical sciences, and the humanities and social sciences. Bennett provides a striking account of how this particular scholarly community has flourished by nurturing scholars and allowing them with the intellectual freedom to pursue their passions. The book clarifies the notion of understanding as it holds in different disciplines and depicts the benefit the world of scholarship can have on the wider community. *The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013)*

Michael Durant Thomas, 2017-07-25 This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security Drawing on established securitisation frameworks Copenhagen and Paris Schools the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3 500 speeches policies and doctrinal articles since 2003 Importantly the author undertakes an examination of the intersection between the political and the military spheres probing the question of how ideology has influenced the military's uptake on the issue In this context the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper political issue and an unprecedented security threat A close examination of the key political actors their intent outlook and political mandate for broader climate action is therefore crucial to understanding the policy freedom and constraints within which military leaders operate The book consists of eight chapters divided into four parts focusing on perspectives and methodological insights empirical case studies case study comparison and concluding observations Offers a rare and systematic examination of military climate policy by a military officer from Australia Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration Develops a unique method that quantifies climate security enabling a graphical representation for quick and ready reference ideally suited to policy makers

Oil's Deep State Kevin Taft, 2017-10-06 Why have democratic governments failed to take serious steps to reduce carbon emissions despite dire warnings and compelling evidence of the profound and growing threat posed by global warming Most of the writing on global warming is by scientists academics environmentalists and journalists Kevin Taft a former leader of the opposition in Alberta brings a fresh perspective through the insight he gained as an elected politician who had an insider's eyewitness view of the role of the oil industry His answer in brief The oil industry has captured key democratic institutions in both Alberta and Ottawa Taft begins his book with a perceptive observer's account of a recent court case in Ottawa which laid bare the tactics and techniques of the industry its insiders and lobbyists He casts dramatic new light on exactly how corporate lobbyists politicians bureaucrats universities and other organizations are working together to pursue the oil industry's agenda He offers a brisk tour of the recent work of scholars who have developed the concepts of the deep state and institutional capture to understand how one rich industry can override the public interest Taft views global warming and weakened democracy as two symptoms of the same problem the loss of democratic institutions to corporate influence and control He sees citizen engagement and direct action by the public as the only response that can unravel big oil's deep state

**What We Think About When We Try Not To Think About Global Warming** Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists

and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description Geoscience for the Public Good and Global Development Gregory R.
