the impacts that juvenile wood has on mechanical properties were quantified The results of this quantification are significant to all producers of fast grown plantations Research has clearly shown that juvenile wood will have a detrimental impact on allowable design stresses for visually graded lumber It is critical that methods are developed to more carefully manage fast grown plantation wood for its most efficient use This review should serve as an overall collection of knowledge pertaining to juvenile wood research in southern pines and should help in the decision making efforts to improve seedling selection techniques and silvicultural practices to maximize the potential for fast grown plantations of southern pines *General Technical Report FPL* ,1978 **Catalog of Copyright Entries.
