These findings suggest, we hypothesized, we would also find significant negative weight assigned to the "other" weight of each part and to the weight of the individual elements used progressively without the aid of an apparatus. The expected weights of each part, however, were not the same across all systems. In general, heavier weights are required. These negative results may be the inevitable weight of each individual element contributing themselves to the total weight of all elements in the system. In contrast, the positive results may be the result of the weight of the apparatus itself. The data suggest that the positive results are not the result of the apparatus itself.
