Bakker,2013-02-15 Water supply privatization was emblematic of the neoliberal turn in development policy in the 1990s  
Proponents argued that the private sector could provide better services at lower costs than governments opponents  
questioned the risks involved in delegating control over a life sustaining resource to for profit companies Private sector  
activity was most concentrated and contested in large cities in developing countries where the widespread lack of access to  
networked water supplies was characterized as a global crisis In Privatizing Water Karen Bakker focuses on three questions  
Why did privatization emerge as a preferred alternative for managing urban water supply Can privatization fulfill its  
proponents expectations particularly with respect to water supply to the urban poor And given the apparent shortcomings of  
both privatization and conventional approaches to government provision what are the alternatives In answering these  
questions Bakker engages with broader debates over the role of the private sector in development the role of urban  
communities in the provision of public services and the governance of public goods She introduces the concept of governance  
failure as a means of exploring the limitations facing both private companies and governments Critically examining a range  
of issues including the transnational struggle over the human right to water the commons as a water supply management  
strategy and the environmental dimensions of water privatization Privatizing Water is a balanced exploration of a critical
