Step 1: Build the first circuit as shown in the [video](#). Connect the circuit as shown, where the potential difference is measured just after the battery across a single resistor. Connect a single resistor across the terminals, and use it to measure the potential difference across the battery. Use the circuit to measure the potential difference across the battery.

Step 2: Now add a second resistor in series with the first. Measure the potential difference across the battery, and the potential difference across each resistor. Compare the potential difference across the battery to the sum of the potential differences across the resistors. Repeat the experiment with three resistors in series.

Build, Measure, Analyze

Build the circuit shown with three resistors, two ammeters and a voltmeter. Measure the potential difference across each resistor, and the potential difference across the battery.

Record the potential difference across each resistor, the potential difference across the battery, and the current in the circuit.
