Communicating Climate Science - HC 254 Great Britain. Parliament. House of Commons. Select Committee on Science and Technology, Great Britain: Parliament: House of Commons: Science and Technology Committee, Andrew Miller, 2014-04-02 The Government is failing to clearly and effectively communicate climate science to the public There is little evidence of co ordination amongst Government government agencies and public bodies on communicating climate science despite various policies at national and regional level to mitigate and adapt to climate change

The mandate to act on climate can only be maintained if the electorate are convinced that the Government is acting on the basis of strong scientific evidence. Ministers therefore need to do more to demonstrate that is the case and consistently reflect the Government approach in all their communications especially with the media. The report also criticises the BBC for its reporting on the issue. It points out that BBC News teams continue to make mistakes in their coverage of climate science by giving opinions and scientific fact the same weight. The BBC is called to develop clear editorial guidelines for all commentators and presenters on the facts of climate that should be used to challenge statements from either side of the climate policy debate that stray too far from the scientific facts. It is important that climate science is presented separately from any subsequent policy response. Government should work with the learned societies and national academies to develop a source of information on climate science that is discrete from policy delivery, comprehensible to the general public and responsive to both current developments and uncertainties in the science.

**Havoc, Thy Name Is Twenty-First Century!** Peter Pogany, 2015-10-16 Just to maintain our standard of living we need to grow the worldwide economy at an unsustainable rate As we seek to hit such lofty targets we are bound to deplete our resources and cause environmental crises on a scale that we have never seen before Revolutions terrorism and wars will follow Peter Pogany examines the problems we face and argues that human culture is governed by thermodynamic cycles of steady states interrupted by chaotic transitions Specifically he postulates that a steady state was interrupted by World War I with a chaotic transition following World War II which has led us to the current world order His theory predicts that global society is drifting toward a new form of self organization that will recognize limits to demographic economic expansion but only after we go through a new chaotic transition that will start sometime between now and the 2030s Havoc Thy Name is Twenty First Century delivers sobering thoughts on where the world is headed but it also offers a glimpse of a bright future that we can embrace once we get through the darkness to come

### **Analytic Research Foundations for the Next-Generation**

**Electric Grid** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-05-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids However the grid that was developed in the 20th century and the incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a need for continued shorter term engineering research and development building on the existing analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in mathematical and computational sciences that is needed for the next generation grid It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation's research and development infrastructure the tools it needs to effectively develop test and use this research
