[The Strongest Magnetic Fields in the Universe](#) Vasily S. Beskin, A. Balogh, Maurizio Falanga, Maxim Lyutikov, Sandro Mereghetti, Tsvi Piran, R.A. Treumann, 2016-01-29 This volume extends the ISSI series on magnetic fields in the Universe into the domain of what are by far the strongest fields in the Universe and stronger than any field that could be produced on Earth The chapters describe the magnetic fields in non degenerate strongly magnetized stars in degenerate stars such as white dwarfs and neutron stars exotic members called

magnetars and in their environments as well as magnetic fields in the environments of black holes These strong fields have a profound effect on the behavior of matter visible in particular in highly variable processes like radiation in all known wavelengths including Gamma Ray bursts The generation and structure of such strong magnetic fields and effects on the environment are also described

The Natriuretic Hormones Harvey Craig Gonick, Vardaman M. Buckalew, 2015-11-24 The title follows from the original demonstration by Dr Hugh de Wardener in 1961 that a humoral agent is produced after extracellular volume expansion which results in a vigorous diuresis and natriuresis Thus the name of natriuretic hormone was coined In the years that followed several investigators pursued the search for the hormone What resulted however was the discovery of several hormones with different characteristics all of which were natriuretic Initially it was found that the hormone was similar in action to ouabain or digoxin hence the appellation of ouabain like or digoxin like The hormone was found to be an inhibitor of Na K ATPase which would fit with it being a cardiotonic steroid On the other hand neither ouabain or digoxin migrated on Sephadex gel filtration in the same locus as the hormone Other investigators claim to have identified the hormone initially as a vanadium diascorbate later as bufadienolides such as marinobufagenin yet later as a macrocyclic derivative of inorganic carbon suboxide with a molecular weight of 408 Da Some support for the latter finding was derived from an earlier report that a semi purified Sephadex derived compound was found to have a molecular weight of about 12 000 Da but the active compound when split from its carrier protein had a molecular weight of exactly 408 Da This compound had not been further identified As further development was the demonstration by Bricker and colleagues that a natriuretic substance could be purified from uremic urine This turned out to be a xathurenic acid derivative Meanwhile the focus began to turn to natriuretic peptides derived from heart ANF and BNP These peptides have a shorter duration of action than the cardiotonic steroid like hormone and ANF has proved to be most useful as a measure of heart failure It should also be stressed that marinobufagenin like ANF is elevated in congestive heart failure whereas the steroid like hormone is depressed or absent in this state This review will attempt to describe and contrast the properties of each of the proposed natriuretic hormones including their locus on Sephadex separation potency duration of action chemical structure if known behavior in hypertension renal failure heart failure and brain disease As most recent work has focussed on marinobufagenin this hormone will be brought up to date by investigators in the field
