Mechatronics and Robotics Marina Indri, Roberto Oboe, 2020-11-24 The term mechatronics was coined in 1969 merging mecha from mechanism and tronics from electronics to reflect the original idea at the basis of this discipline that is the integration of electrical and mechanical systems into a single device The spread of this term and of mechatronics itself has been growing in the years including new aspects and disciplines like control engineering computer engineering and communication information engineering Nowadays mechatronics has a well defined and fundamental role in strict relation with robotics Drawing a sharp border

between mechatronics and robotics is impossible as they share many technologies and objectives. Advanced robots could be defined as mechatronic devices equipped with a smart brain but there are also up to date mechatronic devices used in tight interaction with humans that are governed by smart architectures for example for safety purposes. Aim of this book is to offer a wide overview of new research trends and challenges for both mechatronics and robotics through the contribution of researchers from different institutions providing their view on specific subjects they consider as hot topics in both fields with attention to new fields of application, new challenges to the research communities and new technologies available. The reader of this book will enjoy the various contributions as they have been prepared with actual applications in mind along a journey from advanced actuators and sensors to human robot interaction through robot control, navigation, planning and programming issues. The book presents several state of the art solutions like multiple stage actuation to cope with conflicting specification of large motion spans, ultra high accuracy model based control for high tech mechatronic systems, modern approaches of software systems engineering to robotics and humanoids for human assistance. The reader can also find new techniques in approaching the design of mechatronic systems in some possible industrial and service robotics scenarios with a particular attention for the interaction between humans and mechanisms. *Advances in Italian Mechanism Science* Giuseppe Carbone, Alessandro Gasparetto, 2018-10-29.
