reward workers for costly schooling they rarely if ever use and why cutting education spending is the best remedy Caplan draws on the latest social science to show how the labor market values grades over knowledge and why the more education your rivals have the more you need to impress employers He explains why graduation is our society's top conformity signal and why even the most useless degrees can certify employability He advocates two major policy responses The first is educational austerity Government needs to sharply cut education funding to curb this wasteful rat race The second is more vocational education because practical skills are more socially valuable than teaching students how to outshine their peers Romantic notions about education being good for the soul must yield to careful research and common sense The Case against Education points the way

*Individual Differences in Children and Adolescents* Donald H. Saklofske, Sybil B. G. Eysenck, This uniquely authoritative collection of original papers with contributions from over twenty countries provides a rare insight into research and applied programs in the study of individual differences in children and adolescents worldwide While delinquency proves to be one of the most common areas of interest a wide range of cognitive personality and social characteristics are examined and the use of the Eysenck Personality Questionnaire in many studies allows uniform comparisons to be made between countries The editors have not only overcome the language barriers which hitherto have made such information virtually inaccessible to the English speaking world They have also succeeded in bringing together studies from developed and developing countries East and West to present a global picture of adolescent and child psychology In particular the book highlights the general and specific cultural influences on child development and adolescent psychology in different countries and reflects the social and research concerns of the countries and cultures represented The authors comprise a cross section of professionals in the social and behavioral sciences working in university and clinical settings While North America is well represented by six chapters including Puerto Rico as is Europe particular efforts were made to obtain contributions from Eastern Europe Asia and Africa At the time this book was developed information exchange with eastern European countries was most difficult It is very exciting to present chapters from Hungary Lithuania Romania Russia and Yugoslavia The inclusion of articles from Japan Korea Singapore Sri Lanka and Uganda also add another dimension to studies of individual differences in children Contributions from Australia Israel and New Zealand also allow the book to take on much more of an international perspective on topics ranging from delinquency fears and motivation to intelligence personality and assessment issues This volume provides a plethora of international perspectives on the study of children It will be essential to sociologists psychologists educators and child study specialists

Lorraine T. Benuto, 2012-09-19 This book focuses on diversity culture and ethnicity as they relate to psychological assessment of Hispanics. It is a how-to guide for clinicians, researchers, and instructors working with Hispanic clients. Each chapter contains an overview of cultural considerations needed for assessing the Hispanic client, followed by a specific exploration of the assessment measures available and the research that has been conducted on these measures with Hispanic participants. An exploration of the strengths and limitations of each assessment measure is included. Considering that ethnocultural minority individuals who are of Hispanic/Latino origin make up the largest ethnocultural minority group in the United States, guidelines for working with this population are a must. Given that a large subset of this percentage is composed of immigrants, many of whom do not speak English or who have learned English as a second language, special considerations for effective psychological assessment are necessary. This book fills a gap in the scientific literature by consolidating the research on psychological assessment with Hispanic samples into one comprehensive volume and providing simple recommendations for the psychological assessment of Hispanic clients. An exploration of the general psychological assessment domains, e.g., personality, intelligence, is included with references to research on the major assessment measures used in the field. A more specific exploration of psychodiagnostic assessment measures follows, including the assessment of mood disorders, anxiety disorders, sexual dysfunction, psychosis, etc. Several chapters are dedicated to specialized assessment, including neuropsychological assessment, forensic assessment, and school-based assessment, overall creating the most comprehensive up-to-date research-based compendium of psychological assessment measures for use with Hispanic clients.
