During the past decades enormous progress and enhancement of pharmaceutical manufacturing equipment and its use have been made. And while there are support documents, books, articles, and online resources available on the principles of cleaning and associated processing techniques, none of them provides a single database with convenient ready-to-use training tools. Until now, *Cleaning Validation Manual: A Comprehensive Guide for the Pharmaceutical and Biotechnology Industries* elucidates how to train the man power involved in development, manufacturing, auditing, and validation of bio pharmaceuticals on a pilot scale leading to scale up production. With over 20 easy-to-use template protocols for cleaning validation of extensively used equipments, this book provides technical solutions to assist in fulfilling the training needs of finished pharmaceutical manufacturers. Drawing on the authors' more than two decades of experience in the pharmaceutical and biotech industries, the text offers hands-on training based on current approaches and techniques. The book does not merely provide guidelines or thought processes; rather, it gives ready-to-use formulas to develop Master Plan SOPs and validation protocols. It includes cleaning procedures for the most commonly used equipment in various manufacturing areas and their sampling points using a pharmaceutical manufacturing site with both sterile and non-sterile operations as the case facility. It also provides the training guidelines on downloadable resources to enable users to amend or adopt them as necessary. Grounded in practicality, the book's applicability and accessibility set it apart. It can be used as a guide for implementing a cleaning validation program on site without the help of external consultants, making it a resource that will not be found collecting dust on a shelf but rather referred to again and again.

Good Quality Practice (GQP) in Pharmaceutical Manufacturing: A Handbook Jordi Botet, 2015-09-28

Pharmaceutical manufacturing can be viewed as a supply chain which spans from the production and purchase of the starting and packaging materials through the manufacture of dosage forms until the safe reception of the finished product by the patient. The entire chain comprises of several processes: auditing materials, purchase, procurement, production, storage, distribution, quality control, and quality assurance. The quality standard for pharmaceutical production is current good manufacturing practice (CGMP), which is applied within the frame of a pharmaceutical quality system (PQS). This implementation, however, requires a scientific approach and has to take into account several elements such as risk assessment, life cycle, patient protection, among other factors. Hence, pharmaceutical manufacturing is a complex subject in terms of regulation given the technical and managerial requirements. This comprehensive handbook describes CGMP for new professionals who want to understand and apply the elements which build up pharmaceutical quality assurance. The book gives details about basic quality control requirements such as risk management, quality hazards, and management systems, documentation, clean environments, personnel training, and gives guidelines on regulatory aspects. This is an ideal handbook for undergraduates studying pharmaceutical or industrial manufacturing and supply chains, as well for entrepreneurs and quality control professionals seeking to learn about CGMP standards and implementing quality assurance systems in the pharmaceutical sector. *National Library of Medicine Audiovisuals Catalog* National Library of Medicine (U.S.), **The**
