*Climate Change and Adaptation Planning for Ports* Adolf K. Y. Ng, Austin Becker, Stephen Cahoon, Shu-Ling Chen, Paul Earl, Zaili Yang, 2015-08-14 As key links in transportation and supply chains the effect of climate change on seaports has broad implications for the development prospects of the global economy However the picture is very uncertain because the impacts of climate change will be felt very differently around the world both positively and negatively This book addresses the need for quality theoretical analysis highly innovative assessment methodologies and insightful empirical global experiences so as to identify the best international practices planning and appropriate policies to effectively adapt to develop resilience and indeed benefit from the impacts posed by climate change on transportation and supply chains This book comprises of theories methodologies and case studies from five continents Asia Europe Latin America North America and Oceania addressing climate change and the adaptation planning of ports and transportation infrastructures With reputable contributors from academic policymaking and professional sectors it critically analyses the recent attempts by ports in establishing adaptation plans and strategies so to enhance ports and other transportation infrastructures resilience to the climate change risks This is the first book of its kind to focus on climate change adaptation for ports It offers useful and comprehensive guidance to senior policymakers industrial practitioners and researchers who are eager to understand the dynamics between climate change adaptation planning of ports and transportation infrastructures **Errorless UPPSC**

Uykur,2015-02-26 In this thesis the pseudogap and the precursor superconducting state which are of great importance in clarifying the superconductivity mechanism in high temperature cuprate superconductors are investigated with a c axis optical study in  $\text{YBa}_2\text{Cu}_{1-x}\text{Zn}_x\text{O}_y$  Testing was performed over a wide energy range with smaller temperature intervals for several Zn substituted samples as well as for several carrier doping levels A spectral weight SW analysis in which the pseudogap behavior can be separated from the superconducting condensate with the SW transfer to the high energy region revealed that the pseudogap is not the precursor of the superconductivity carriers moving to the high energy region with pseudogap opening never contribute to the superconducting condensation Moreover the high energy transfer continues even below  $T_c$  for the Zn substituted samples in which we weaken the superconductivity which gives evidence to the coexistence of the pseudogap and the superconducting gap below  $T_c$  On the other hand the analysis of optical conductivity revealed that a precursor state to superconductivity can be defined at temperatures much higher than  $T_c$  The superconducting carrier density  $n_s$  was calculated for each temperature above and below  $T_c$  and the results confirmed the existence of  $n_s$  at temperatures above  $T_c$  The observed real superconducting condensate  $n_s$  above  $T_c$  puts a serious constraint on the theory for high  $T_c$  superconductivity A theory based on an inhomogeneous superconducting state in which a microscopically phase separated state in a doped Mott insulator can be observed is the most plausible candidate This theory can explain the existence of  $n_s$  and the observed temperature range for the precursor superconducting state The results obtained show that the pseudogap coexists with superconductivity below  $T_c$  and is not the precursor of superconductivity On the other hand it is also possible to define a precursor superconducting state that is different than the pseudogap The temperature range and the observed superconducting condensate in this state can be explained with the help of the inhomogeneous superconducting state
